

**AGR01-20**

**200 g/t Ag**  
**0.18 g/t Au**

Epithermal quartz-carbonate vein in brecciated schist with visible silver sulfosalts, including pyrargyrite.

**AGR10-20**

**356 g/t Ag**  
**2.0 g/t Au**

Epithermal vein breccia hosted in sericite alteration zone in volcanic unit. Quartz-dominated mineralization contains silver minerals including pyrargyrite.

**AGR10-20**

**2.0 g/t Ag**  
**0.32 g/t Au**

Oxidized, gold enriched hydrothermal quartz carbonate breccia hosted in volcanic unit.

**AGR05A-20**

**911 g/t Ag**  
**0.41 g/t Au**

Polymetallic sulfide mineralization in epithermal quartz carbonate vein. Native silver in quartz inclusions with other high grade silver species occurring with galena and sphalerite.

**AGR05-20**

**14 g/t Ag**  
**0.42 g/t Au**

Epithermal vein of fine-grained quartz containing disseminated sulfides, predominately arsenopyrite.
