

EXCELLON

EXCELLON RESOURCES INC.

ANNUAL INFORMATION FORM

For the Year Ended December 31, 2018

March 29, 2019

PRELIMINARY NOTES

Interpretation

Words importing the singular number, where the context requires, include the plural and vice versa and words importing any gender include all genders. In this annual information form the terms “we”, “us”, “our” and “ours” refer to the Company.

A glossary of certain technical terms and abbreviations that appear in this annual information form is included under the section entitled “Glossary of Technical Terms and Abbreviations.”

Currency

All dollar amounts herein are in Canadian dollars, unless otherwise stated.

Date of Information

Unless otherwise noted, the information set forth in this AIF is current as of December 31, 2018.

Note Regarding Forward-Looking Statements

This annual information form contains “forward-looking statements” within the meaning of applicable Canadian Securities legislation and applicable U.S. securities laws concerning the Company’s plans for its properties, operations and other matters. Except for statements of historical fact relating to the Company, certain statements contained herein constitute forward-looking statements including, but not limited to, statements regarding future anticipated and current exploration programs and expenditures, exploration results, the potential discovery and delineation of mineral deposits/resources/reserves, potential mining and processing scenarios, production estimates, the anticipated success of mineral processing procedures, anticipated continued sales of ore and concentrate sales, proposed business plans, anticipated business trends and metal prices, future anticipated operating costs, reclamation cost estimates, revenues and cash flow, and may relate to analyses and other information that are based on forecasts of future results, estimates of amounts not yet determinable and assumptions of management. Any statements that express or involve discussions with respect to predictions, expectations, beliefs, plans, projections, objectives, assumptions or future events or performance (often, but not always, using words or phrases such as “expects” or “does not expect”, “is expected”, “anticipates” or “does not anticipate”, “plans”, “estimates”, “believes”, “proposed”, “intends” or “does not intend”, or stating that certain actions, events or results “may”, “could”, “would”, “might” or “will” be, or not be, taken, occur or be or not be achieved) are not statements of fact and may be “forward-looking statements”.

Forward-looking statements are subject to a variety of risks and uncertainties, which could cause actual events or results to differ materially and adversely from those reflected in the forward-looking statements. A description of the risk factors applicable to the Company can be found in this annual information form under “Description of the Business – Risk Factors”. Should one or more of the risks and uncertainties materialize, or should underlying assumptions prove incorrect, actual results may vary materially and adversely from those described in forward-looking statements. Forward looking statements are made based on management’s beliefs, estimates, assumptions and opinions on the date the statements are made, and the Company undertakes no obligation to update forward-looking statements if these beliefs, estimates, assumptions and opinions or other circumstances should change. Investors are cautioned against attributing undue certainty or weight to forward-looking statements.

Readers are also cautioned that the assumptions used in the preparation of such information, although considered reasonable at the time of preparation, may prove to be imprecise and, as such, undue reliance should not be placed on forward-looking statements. The Company’s actual results, programs and

financial position could differ materially from those expressed in or implied by these forward-looking statements, and accordingly, no assurance can be given that the events anticipated by the forward-looking statements will transpire or occur, or that, if any of them do so, what benefits the Company will derive therefrom.

All of the Company's public disclosure filings may be accessed via SEDAR at www.sedar.com and readers are urged to review these materials, including the technical reports filed with respect to the Company's mineral properties.

Cautionary Note to United States Investors Concerning Estimates of Measured, Indicated and Inferred Resources

The terms “Measured”, “Indicated” and “Inferred” Mineral Resources used or referenced in this annual information form are defined in accordance with NI 43-101 under the guidelines set out in the CIM Standards on Mineral Resources and Mineral Reserves. The CIM standards differ significantly from standards in the United States. United States investors are advised that while such terms are recognized and required by Canadian regulations, the SEC does not recognize them. “Inferred Mineral Resources” have a great amount of uncertainty as to their existence and as to their economic and legal feasibility. It cannot be assumed that all or any part of an Inferred Mineral Resource will ever be upgraded to a higher category or that Mineral Resources will ever be upgraded to Mineral Reserves. Under Canadian rules, estimates of Inferred Mineral Resources may not form the basis of feasibility or other economic studies other than a Preliminary Economic Study (“PEA”).

United States investors are cautioned not to assume that all or any part of Measured or Indicated Mineral Resources will ever be converted into Mineral Reserves. United States investors are also cautioned not to assume that all or any part of an Inferred Mineral Resource exists or is economically or legally mineable or that an Indicated Mineral Resource is economically or legally mineable.

Cautionary Note to United States Investors regarding Adjacent or Similar Properties

This annual information form may also contain information with respect to adjacent or similar mineral properties in respect of which the Company has no interest or rights to explore or mine. The Company advises United States investors that the SEC’s mining guidelines strictly prohibit information of this type in documents filed with the SEC. Readers are cautioned that the Company has no interest in or right to acquire any interest in any such properties, and that mineral deposits on adjacent or similar properties are not indicative of mineral deposits on the Company's properties.

GLOSSARY OF TERMS AND ABBREVIATIONS

The following is a glossary of terms and abbreviations that appear in this AIF:

2016 Offering means the bought deal public offering of 13,250,000 units (“2016 Public Units”) at a price of \$1.15 per 2016 Public Unit for gross proceeds of approximately \$15.2 million, which closed on July 26, 2016. Each 2016 Public Unit comprised one Common Share and one half-warrant, with each whole warrant entitling the holder to acquire a Common Share at a price of \$1.75 prior to July 26, 2018.

2016 Private Placement means the non-brokered equity private placement for gross proceeds of \$3.0 million through the issuance of 6,666,667 units (each, a “Unit”) at a price of \$0.45 per Unit. Each Unit comprised one Common Share and one half-share purchase warrant of the Company, with each full warrant entitling the holder to purchase one additional Common Share of the Company at a price of \$0.65 per share prior to April 4, 2018.

2017 Offering means the bought deal public offering of 7,393,750 units (“2017 Public Units”) at a price of \$2.00 per 2017 Public Unit for gross proceeds of approximately \$14.8 million, which closed on November 9, 2017. Each 2017 Public Unit comprised one Common Share and one half-warrant, with each whole warrant entitling the holder to acquire a Common Share at a price of \$2.80 prior to December 31, 2018.

AgEq means silver equivalent ounces.

AIF means this Annual Information Form.

Apex means Apex Silver Mines Limited (a predecessor of Golden Minerals Company), an American Stock Exchange-listed company with whom Excellon was at one time in a joint venture on a large number of concessions comprising the project area.

CIM means the Canadian Institute of Mining, Metallurgy and Petroleum.

Common Shares means the common shares in the capital of the Company.

Company (or Excellon) means Excellon Resources Inc.

CRD means Carbonate Replacement Deposit, a type of mineral deposit found worldwide and forms through a chemical reaction whereby mineral-bearing fluids dissolve carbonate minerals and immediately precipitate sulphide minerals in their place. This replacement process often faithfully preserves delicate textures seen in the original rocks. CRD mineralization may also be deposited into pre-existing openings in various rock types in particular carbonate rocks. Mineralized fluids in CRDs often follow structures for long distances creating elongate deposits called “chimneys” when standing at high angles and “mantos” when flat-lying.

Debentures means the 3.75% secured convertible debentures issued by the Company on November 27, 2015 for proceeds of \$5.61 million.

DSU means deferred share unit.

DSU Plan means the deferred share unit plan of the Company dated December 11, 2013, as amended and restated on March 25, 2014, providing for the issuance of DSUs.

Evolución Property (formerly referred to as the Miguel Auza property) means the over 45,000-hectare (450 km²) exploration property located in Zacatecas State, Mexico.

Financial Reports means the Company’s audited consolidated financial statements and related notes for the year ended December 31, 2018 and the MD&A.

Hecla means Hecla Mining Company, a publicly-listed company operating mines and exploring in North

America and listed on the NYSE under the symbol “HL”.

Hydro-Ressources Inc. is a consulting firm based in Lévis, Quebec, which provides hydrogeological services to the mining industry particular in relation to mine dewatering.

Hydrothermal means heated or superheated fluid or water from depth in the earth’s crust.

Indicated Mineral Resource means that part of a Mineral Resource for which quantity, grade or quality, densities, shape and physical characteristics are estimated with sufficient confidence to allow the application of Modifying Factors in sufficient detail to support mine planning and evaluation of the economic viability of the deposit. Geological evidence is derived from adequately detailed and reliable exploration, sampling and testing and is sufficient to assume geological and grade or quality continuity between points of observation.

Inferred Mineral Resource means that part of a Mineral Resource for which quantity and grade or quality are estimated on the basis of limited geological evidence and sampling. Geological evidence is sufficient to imply but not verify geological and grade or quality continuity. The estimate is based on limited information and sampling gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes.

Manto means a tabular, relatively flat-lying mineral deposit that tends to lie within a particular rock bed or series of beds, derived from the Spanish word for blanket.

MD&A means management discussion and analysis for the years ended December 31, 2018 and 2017.

Measured Mineral Resource is that part of a Mineral Resource for which quantity, grade or quality, densities, shape, and physical characteristics are estimated with confidence sufficient to allow the application of Modifying Factors to support detailed mine planning and final evaluation of the economic viability of the deposit. Geological evidence is derived from detailed and reliable exploration, sampling and testing and is sufficient to confirm geological and grade or quality continuity between points of observation.

Miguel Auza Mill means the Company’s mineral processing facility located at the Evolución Property in Zacatecas State, Mexico.

Mineral Reserve means the economically mineable part of a Measured or Indicated Mineral Resource. It includes diluting materials and allowances for losses, which may occur when the material is mined or extracted and is defined by studies at Pre-Feasibility or Feasibility level as appropriate that include application of Modifying Factors. Such studies demonstrate that, at the time of reporting, extraction could reasonably be justified. Mineral Reserves are classified as Probable or Proven.

Mineral Resource means a concentration or occurrence of solid material of economic interest in or on the Earth’s crust in such form, grade or quality and quantity that there are reasonable prospects for eventual economic extraction. The location, quantity, grade or quality, continuity and other geological characteristics of a Mineral Resource are known, estimated or interpreted from specific geological evidence and knowledge, including sampling.

“**Modifying Factors**” include, but are not restricted to, mining, processing, metallurgical, infrastructure, economic, marketing, legal, environmental, social and governmental factors.

MK Metal means MK Metal Trading Mexico, S.A. de C.V., a subsidiary within the Ocean Partners group of companies.

NI 43-101 means National Instrument 43-101 – *Standards of Disclosure for Mineral Projects*.

NSR means Net Smelter Return or Net Smelter Royalty and means a defined percentage of the gross

revenue from a resource extraction operation, generally less a proportionate share of transportation, insurance, and processing costs.

Optimization Plan means the mine dewatering program developed by the Company in consultation with HydroRessources Inc. and Technosub Inc., as further described in press releases dated April 27, 2015, June 2, 2015 and November 2, 2015 and the Technical Report.

Osisko means Osisko Mining Corporation, a publicly-listed mineral exploration company with projects in Canada and listed on the TSX under the symbol “OSK”.

Osisko Shares means the publicly traded common shares OSK of Osisko Mining Corporation on the TSX.

Pb means the elemental symbol for lead.

Platosa Property means the 20,969 hectares of mineral concessions in Durango State, Mexico on which the Platosa mine is located.

PROFEPA means the Procuraduría Federal de Protección al Ambiente, the environmental regulator of Mexico.

PSZ means the Platosa Structural Zone, the principal fault system in the Platosa Property area.

QA/QC means quality assurance/quality control; systematic procedures that are used to validate the control and testing of samples in a specified manner.

Qualified Person means an individual who is an engineer or geoscientist with at least five years of experience in mineral exploration, mine development or operation or mineral project assessment, or any combination of these; has experience relevant to the subject matter of the mineral project; and is a member or licensee in good standing of a professional association (“professional association” means a self-regulating organization with the power to discipline its members, of engineers, geoscientists or both engineers and geoscientists that is recognized under the terms of NI 43-101).

Saltillera Properties means western parts of the Platosa project area, 100% owned by the Company, originally optioned from Altiplano. Includes the area of the Saltillera and Soccoro mines proper, but also encompasses the historic Zorra, Dios da Bondad and Refugio mines/areas.

RSU means restricted share unit.

RSU Plan means the Company’s restricted share unit plan dated December 11, 2013, as amended and restated on March 25, 2014.

SEC means United States Securities and Exchange Commission.

SEDAR (System for Electronic Document Analysis and Retrieval) means an electronic filing system developed for the Canadian Securities Administrators to facilitate electronic filing and dissemination of securities regulatory documents by reporting issuers and related communications with securities regulators.

Skarn refers to an alteration assemblage dominated by calcium and magnesium silicate minerals (dominantly garnets, pyroxenes and amphiboles), formed by reaction between silica-bearing fluids and carbonate rocks, converting original carbonate minerals to silicate minerals. Economically mineralized skarns contain potentially extractable amounts of certain metals and are classified based on the dominant metal (e.g., Copper skarn or Lead-Zinc skarn). Skarns typically form near intrusive bodies and may have massive sulphide replacement mineralization on their distal sides.

Technical Report means the NI 43-101 report entitled “*Technical Report for the Platosa Silver-Lead-Zinc Mine, Mexico*” prepared for the Company by Michael Selby, P.Eng., Sebastien Bernier, P.Geo., Mark

Liskowich, P.Geo., and Blair Hrabj, P.Geo., of SRK Consulting (Canada) Inc., Chantal Jolette, P.Geo., of Analytical Solutions Ltd. and Ben Pullinger, P.Geo. and Denis Flood, P.Eng., officers of the Company, dated September 7, 2018.

Technosub Inc. is a consulting firm based in Rouyn-Noranda, Québec that provides pumps and pump engineering companies in various industries.

Trafigura means Trafigura México, S.A. de C.V.

TSX means the Toronto Stock Exchange.

VWAP means volume-weighted average price.

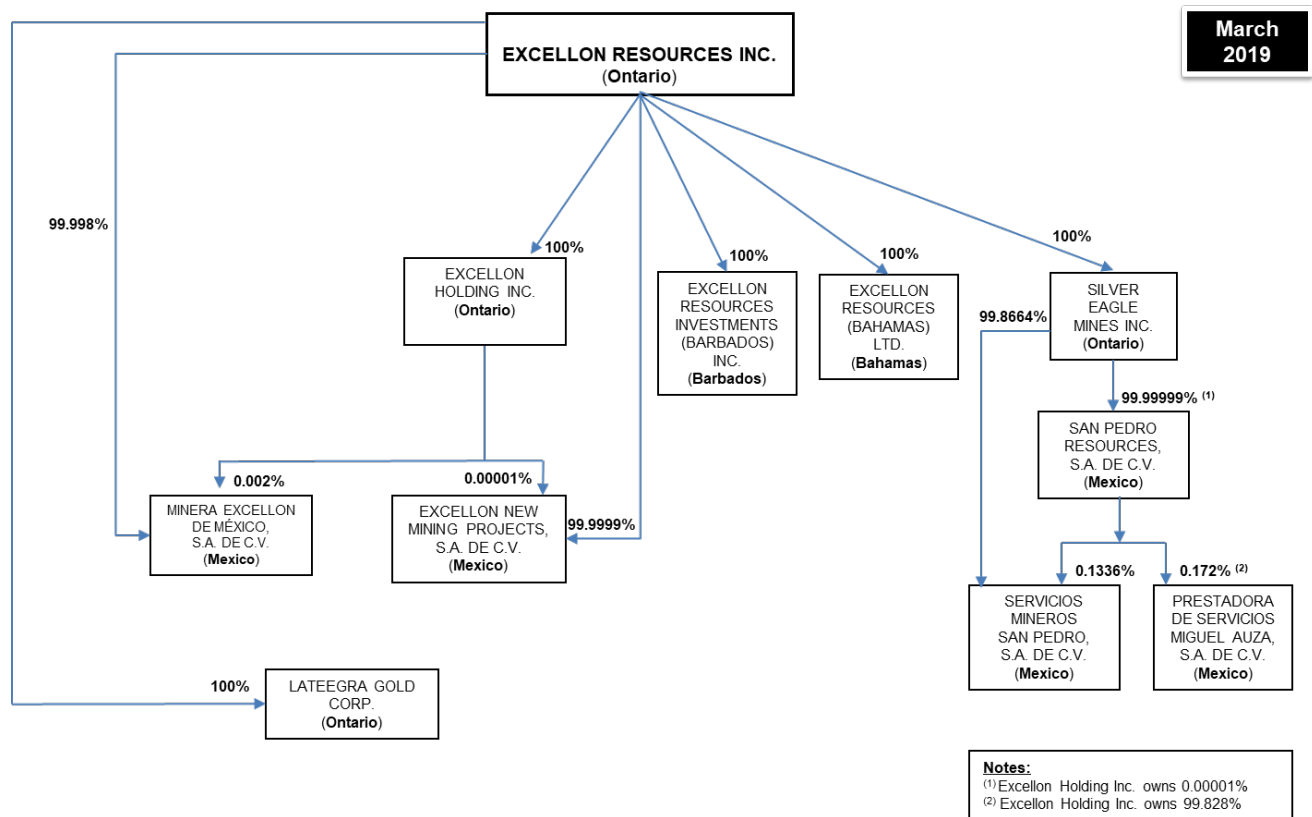

CORPORATE STRUCTURE

Incorporation

Excellon Resources Inc. was incorporated under the *Company Act* (British Columbia) on March 4, 1987 and continued under the *Business Corporations Act* (Ontario) on May 31, 2012. The registered and principal office of the Company is located at 10 King Street East, Suite 200, Toronto, Ontario M5C 1C3. The Company's telephone number is (416) 364-1130 and its website address is www.excellonresources.com.

Corporate Structure

The diagram below sets out the organizational structure of the Company. Reference to the "Company" or "Excellon" in this Annual Information Form means Excellon Resources Inc. and its subsidiaries, except as may otherwise be indicated.

GENERAL DEVELOPMENT OF THE BUSINESS

Excellon is a mineral resource company engaged in the acquisition, exploration, development and mining of mineral properties. During the past three years the Company has been involved primarily in the exploration and development of its Platosa Property in Durango State, Mexico, where Excellon is producing silver, lead and zinc from high-grade manto deposits.

Three-Year History

During the past three years, the Company has conducted mining and mineral production, development and exploration activities in Mexico and Canada, with the focus being its Platosa and Evolución Properties in Durango and Zacatecas, Mexico, respectively. The principal product and source of cash flow for Excellon is the mining and sale of lead and zinc concentrates from production at the Platosa Property.

Events that influenced the general development of the business over the past three years are described below (with date press release in brackets, if applicable):

2016

- Completed the sale of the DeSantis Property to Osisko (April 11 and June 6, 2016)
- Completed the 2016 Private Placement with Eric Sprott raising gross proceeds of \$3 million (April 4, 2016)
- Completed the 2016 Offering for gross proceeds of \$15.2 million (July 26, 2016)
- Completed 60% of the construction of the Optimization Project including excavation of two dewatering stations, civil, electrical, structural, and mechanical installations as well as the drilling of 12 dewatering wells
- Daniella Dimitrov and Laurie Curtis joined the Board of Directors (December 20, 2016)
- Recommenced exploration drilling on the Platosa Property (August 17, 2016)
- Strengthened management teams with the addition of Denis Flood as Vice President Technical Services (July 18, 2016) and Ben Pullinger as Vice President of Geology (September 12, 2016).
- Produced 1.3 million AgEq ounces, including 0.8 million ounces silver, 4.4 million pounds lead and 5.6 million pounds zinc.

2017

- Appointed Dr. Craig Ford as Vice President Corporate Responsibility to strengthen the Company's commitment to Corporate Responsibility and improving relationships with all stakeholders associated with the Company (January 10, 2017)
- Completed the sale of 837,000 Osisko shares for net proceeds of \$4.4 million (April 5, 2017)
- Completed implementation of the Optimization Plan (July 2017)
- Completed the 2017 Offering for gross proceeds of \$14.8 million (November 9, 2017)
- Jacques McMullen and Andrew Farncomb joined the Board of Directors (November 15, 2017 and December 15, 2017, respectively)
- Produced 1.5 million AgEq ounces, including 0.7 million ounces silver, 4.2 million pounds lead and 6.1 million pounds Zinc.

2018

- Entered into a milling arrangement with Hecla to process ore from the San Sebastian Mine. The initial milestone will be the processing of a bulk sample expected to be completed in 2019 (February 26, 2018)
- Completed an updated mineral resource estimate and technical report for the Platosa Project as

at March 31, 2018 (September 7, 2018)

- Entered into an option agreement with Wallbridge Mining Company Limited to sell the Beschefer property (October 17, 2018)
- Acquired a 31,000-ha land package adjacent to and on trend with the Company's existing mineral rights in Zacatecas State and now forming part of the Evolución Property (October 30, 2018)
- Produced 1.9 million AgEq ounces, including 0.9 million ounces silver, 5.5 million pounds lead and 7.9 million pounds zinc.

DESCRIPTION OF THE BUSINESS

Excellon is a mining and exploration company currently focussed on the exploration, development and mining of silver-lead-zinc mineralization on its 20,969-hectare Platosa Property in northeastern Durango State, Mexico. The common shares of the Company are listed on the TSX under the symbol "EXN".

Principal Product

The Company's principal product is lead-silver and zinc-silver concentrates.

Production

Crushed ore mined from the Company's Platosa Property is shipped to its mill at Miguel Auza for processing, where separate mineral concentrates containing lead-silver and zinc-silver are produced on site. These mineral concentrates are then transported and sold to two third parties for further processing.

For 2018, tonnes of fresh ore mined and milled of 57,475 tonnes and 56,874 tonnes represented a 1% and 4% improvement compared to 2017. In addition, the Company also milled 24,130 tonnes of low-grade historical stockpiles, representing a 159% improvement compared to 9,316 tonnes in 2017.

Silver prices were relatively flat during H1 2018 at an average of US\$17/oz before decreasing in H2 averaging US\$15/oz during H2 for an average of US\$16/oz for the year.

Sales during 2018 totalled US\$24.3 million, a 15% improvement compared to US\$21.2 million in 2017, with the increase in sales being primarily related to increased metal production and improved treatment and refining charges with slightly offsetting lower metal prices.

As at December 31, 2018 the Company's cash, cash equivalents and marketable securities totaled US\$6.5 million (December 31, 2017 – US\$12.3 million) and working capital totaled US\$7.9 million (December 31, 2017 – US\$13.8 million). As at December 31, 2018, the Company's trade receivables were US\$1.9 million (December 31, 2017 – US\$2.4 million).

Economic Dependence

From 2011 to 2016, Trafigura was the sole purchaser of the Company's concentrates. In late 2016, the Company negotiated offtake agreements for 2017 with Trafigura and MK Metal following a robust tender process involving numerous commodity traders. In 2018, the Company, after another robust tender process, extended the agreements with each party for 2018 production under new terms reflective of the market at the time. The Company has negotiated a 2019 offtake agreement with Trafigura in respect of zinc offtake and will continue to operate under the 2018 terms on lead offtake with both Trafigura and MK Metal until Q2 2019. The Company believes that because of the availability of alternative processing and commercialization options for its concentrate, it would suffer no material adverse effect if it lost the

services of Trafigura or MK Metals.

Competitive Conditions

The precious metal mineral exploration and mining business is a competitive business. The Company competes with numerous other companies and individuals in the search for and the acquisition of attractive precious metal mineral properties, and with a number of other producers of silver. The ability of the Company to acquire precious metal mineral properties in the future will depend not only on its ability to develop its present properties, but also on its ability to select and acquire suitable producing properties or prospects for precious metal development or mineral exploration. Refer to “Risk Factors” below.

Foreign Operations

The Company’s revenue is currently dependent on production from the Platosa Mine, its material producing property located in Mexico. The Company’s operations are exposed to various levels of political, economic and other risks and uncertainties as discussed in “Risk Factors” below.

Employees

As at December 31, 2018, the Company and its wholly-owned subsidiaries employed 353 individuals, along with 77 outside contractors on a fee-for-service basis for conducting mining, exploration and related activities.

Specialized Skill and Knowledge

Most aspects of the Company’s business require specialized skills and knowledge. Such skills and knowledge include the areas of geology, permitting, drilling, metallurgy, mining engineering, process engineering, safety, health, environmental protection, community relation, human rights, logistical planning and implementation of exploration programs as well as finance and accounting. The Company has retained a number of employees and consultants with extensive experience in mining, geology, exploration and with the skills necessary to assist in the Company’s day-to-day operations.

Environmental Protection

The Company conducts mining, processing and exploration activities in the states of Durango and Zacatecas, Mexico. Such activities are subject to various laws, rules and regulations governing the protection of the environment, including requirements for closure and reclamation of mining properties.

In the jurisdictions where the Company operates, specific statutory and regulatory requirements impose standards which must be met throughout the exploration, development and operational stages of a mining property with regard to air quality, water quality, fisheries and wildlife protection, solid and hazardous waste management and disposal, mine waste management, noise, land use and reclamation. Changes in any applicable governmental regulations to which the Company is subject may adversely affect its operations. Failure to comply with any condition set out in any required permit or with applicable regulatory requirements may result in the Company being unable to continue to carry out its activities. The impact of these requirements cannot accurately be predicted.

The financial and operational effects of environmental protection requirements on the Company’s capital expenditures, earnings and competitive position have not been significant in the year ended December 31, 2018 and are not expected to become significant until the closure of existing mining

operations and the Company undertakes reclamation activities on its properties. Details and quantification of the Company's reclamation and closure costs are discussed in the Company's Financial Reports, available on SEDAR at www.sedar.com, and in the sections entitled "Closure and Rehabilitation" and "Risk Factors" below.

Subsidiary Corporate Governance and Internal Controls

The Company has implemented a system of corporate governance, internal controls over financial reporting, and disclosure controls and procedures that apply at all levels of the Company and its subsidiaries. These systems are overseen by the board of directors of the Company and implemented by the Company's senior management. The relevant features of these systems include:

Control Over Subsidiaries

The Company's corporate structure has been designed to ensure that the Company controls or has a measure of direct oversight over the operations of its subsidiaries. The Company's subsidiaries are 100% beneficially owned, controlled or directed, directly or indirectly, by the Company. The Company, as the ultimate shareholder, has internal policies and systems in place which provide it with visibility into the operations of its subsidiaries, including its subsidiaries operating in emerging markets, and the Company's management team is responsible for monitoring the activities of the subsidiaries.

In addition, the Company directly controls the appointments of the directors and officers of its subsidiaries. The directors of the Company's subsidiaries are ultimately accountable to the Company as the shareholder appointing him or her, and the board of directors of the Company and its senior management. Further, the annual budget, capital investment and exploration program in respect of the Company's mineral properties are established by the Company.

Further, the authorized signing officers for the bank accounts of the foreign subsidiaries are either employees of the Company or employees of the subsidiaries, as the case may be.

All the minute books and corporate records of the Company's subsidiaries are kept at the offices of local corporate secretarial services in the respective jurisdictions in which such subsidiaries exist. All disbursements of corporate funds and operating capital to subsidiaries of the Company are reviewed and approved by the Chief Executive Officer and the Chief Financial Officer of the Company and are based upon pre-approved budgeted expenditures.

In connection with the acquisition, ownership and disposition of material property interests in Mexico, including mining concessions and real property interests, the Company engages a reputable law firm located in Mexico to periodically conduct a review of the Company's ownership of its material property interests. In respect of other assets, such as equipment or materials purchased by its foreign subsidiaries, the Company has enacted internal control procedures to ensure that all appropriate documentation is obtained for the legal transfer of assets to the Company (or its applicable subsidiary). The Company and its local legal counsel are familiar with the nature of transactions customary in the Mexican mining industry which allows them to identify and ensure that ownership of property interests and other assets is legally valid.

Strategic Direction

While the mining operations of each of the Company's subsidiaries are managed locally, the board of directors of the Company is responsible for the overall stewardship of the Company and, as such, supervises the management of the business and affairs of the Company (and its subsidiaries). More specifically, the board of directors of the Company is responsible for reviewing the strategic business plans and corporate objectives, and approving acquisitions, dispositions, investments, capital expenditures and other transactions and matters that are material to the Company including those of its material subsidiaries.

The Company has ensured that only the Chief Executive Officer and the Chief Financial Officer of the Company have the authority to authorize the sale or disposition of the property of the Company's foreign subsidiaries to protect the Company's interests and to ensure that appropriate authorization of material asset transactions has been provided. In addition, the Company has established a series of internal control procedures to govern the operation of the foreign subsidiaries and has granted certain limited powers of attorney to employees who are involved with the management of the foreign subsidiaries to allow such individuals to operate the day-to-day operations of the foreign subsidiaries.

Internal Control Over Financial Reporting

The Company prepares its consolidated financial statements and management's discussion and analysis on a quarterly and annual basis, using International Financial Reporting Standards, which require financial information and disclosures from its subsidiaries. The Company implements internal controls over the preparation of its financial statements and other financial disclosures to provide reasonable assurance that its financial reporting is reliable and that the quarterly and annual financial statements and management's discussion and analysis are being prepared in accordance with International Financial Reporting Standards and applicable Canadian securities laws.

All public documents and statements relating to the Company and its subsidiaries containing material information (including financial information) are reviewed by senior management, including the Chief Executive Officer and the Chief Financial Officer before such material information is disclosed, to make sure that all material information has been considered by management of the Company and properly disclosed.

The Company currently sells its metal concentrates to two purchasers, both global commodities traders. Upon completion of the sale of such metal concentrates, the purchaser deposits the proceeds into an account in Mexico that is controlled from Toronto by the Chief Executive Officer and Chief Financial Officer of the Company. In order to allow the utilization of the funds when appropriate, the Company has granted certain members of management located in Mexico powers of attorney. Notwithstanding the foregoing, upon the receipt of funds from the purchaser, the majority of such funds received by the foreign subsidiaries are immediately transferred to the Company's Canadian bank accounts, with only sufficient funds required to fund day-to-day operations of the foreign subsidiaries retained in the foreign subsidiaries' bank accounts.

These systems of corporate governance, internal control over financial reporting ("ICFR") and disclosure controls and procedures ("DC&P") are designed to ensure that, among other things, the Company has access to all material information about its subsidiaries, including those operating in emerging markets.

During 2018, the Company identified a material weakness in its ICFR and DC&P. For more information, refer to “Risk Factors – Material Weakness in Financial Controls”, below, and “Internal Control over Financial Reporting and Disclosure Controls and Procedures,” in the MD&A.

Local Laws and Government Relations

The Company hires and engages local experts and professionals (i.e. legal and tax consultants) to advise the Company with respect to current and new regulations in Mexico in respect of banking, financial, tax and operational matters. The Company utilizes large, established and well recognized financial institutions in both Canada and Mexico. There are no material differences between day-to-day banking operations in Mexico and those in Canada. The government of Mexico regulates mining activities through the Ministry (Secretariat) of Mining. The Company uses local counsel and local consultants to assist it with its government and community relations.

Enforcement of Judgments

All of the Company's material assets (i.e. permits, land, equipment, etc.), other than its unallocated cash (which is maintained with Canadian chartered bank) are located in Mexico. An investor's cause of action under Canadian securities laws would be against the Company, not against any of its subsidiaries outside of Canada. Accordingly, any investor with jurisdiction to do so is entitled to file suit against the Company to exercise its statutory rights and remedies under Canadian securities laws. The location of the assets does not affect this right, although the presence of the Company's cash resources in Canada would, if any suit were ever successful, provide an investor with the possibility of enforcing against the cash assets in Canada. That said, to the extent the Company's cash resources are advanced to the Company's foreign subsidiaries, investors may have difficulty collecting from and enforcing against the Company and its foreign subsidiaries any judgments obtained in Canada. See "*Risk Factors – Risks Related to the Company and its Business – Enforcement of Legal Rights*".

MATERIAL MINERAL PROJECTS

Pursuant to National Instrument 51-102 – Continuous Disclosure Obligations (“NI 51-102”), Excellon has identified the Platosa Property in Durango State, Mexico as its sole material property.

The Platosa Property is the Company’s principal producing property. The Company also holds the Evolución Property located in northern Zacatecas State, 14,000 hectares of which was acquired through the acquisition of Silver Eagle Mines Inc. in 2009. In October 2018, the Company applied for and was granted concessions over an additional 31,000 ha contiguous with and now forming part of the larger Evolución Property land package. Ore produced at the Platosa mine is processed at the Company’s mill located at the Evolución Property. The mine at the Evolución Property is currently on care and maintenance. In 2018, the Company recommenced regional scale reconnaissance work as well as proof of concept drill programs at key targets.

PLATOSA PROPERTY, DURANGO STATE, MEXICO

The following information is supported by the Technical Report of the Platosa Property dated March 31, 2018 as prepared by Michael Selby, P.Eng., Sebastien Bernier, P.Geo., Mark Liskowich, P.Geo., and Blair Hrabí, P.Geo., of SRK Consulting (Canada) Inc., Chantal Jolette, P.Geo., of Analytical Solutions Ltd. and Ben Pullinger, P.Geo. and Denis Flood, P.Eng., officers of the Company, each of whom are “Qualified

Persons” as defined in NI 43-101. Reference should be made to the full text of the Technical Report, which is incorporated by reference in its entirety into this AIF, and which is available for review under the Company’s profile on SEDAR at www.sedar.com, and on the Company’s website at www.excellonresources.com. Supplemental information, some of which supersedes or replaces that in the Technical Report was prepared by the Company under the supervision of Ben Pullinger, Excellon’s Senior Vice President Geology since September 12, 2016, and Denis Flood, Excellon’s Vice President Technical Services since July 18, 2016, each of whom is a Qualified Persons for the purposes of NI 43-101.

Property Description, Location and Access

The Platosa Property is located in the northeast portion of the State of Durango, north-central Mexico, approximately 45 kilometres north of the city of Torreón, and 5 kilometres north of the village of Bermejillo. Torreón is an industrial centre of more than one million people when combined with the adjacent cities of Gomez Palacio and Lerdo. The Torreón International Airport is serviced by several daily non-stop flights to and from Mexico City and the United States. The property is 63 km north northwest by road from the airport via Mexico Highway 49, which is a major north-south trucking route. Rail and power transmission lines run parallel to the highway, and the entire project area is easily accessible year-round with two-wheel-drive vehicles.

The Company holds 80 Mining Concessions at Platosa covering a total area of approximately 20,969 ha. These concessions and fractional concessions are held directly by Excellon. Excellon also holds certain surface rights for portions of the property.

Through the acquisition of Silver Eagle Mines Inc. (Silver Eagle) in 2009, Excellon acquired part of the Evolución Property, located 220 kilometres south of Platosa in Zacatecas State. This property includes the historical (now closed) underground mine, an operating flotation mill, and a tailings management facility. In October 2018, the Company applied for and was granted concessions over an additional 31,000 ha contiguous with and now forming part of the larger Evolución Property land package.

Site Infrastructure

The Platosa Property site and mine facilities include the following:

- Surface facilities include offices, shops, compressors, fuel storage, electric substations, standby generators, crushing and stockpile facilities, portal, ventilation fans, run-of-mine (ROM) storage, underground and surface water settling ponds, diamond drill core logging and storage facilities, and dry facilities
- Facilities providing basic infrastructure to the mine include well-maintained gravel roads that access the site as well as a network of roads that service the various ancillary facilities and electric power distribution
- Underground infrastructure includes ramps, raises, ventilation/service raises, explosives magazines, dewatering pumps, and underground mobile equipment fleet
- Access is provided by paved highway and gravel roads to the company-owned Miguel Auza Mill located at the Evolución Property
- Grid electric power supply to the site

The Evolución Property site and Miguel Auza Mill facilities include the following:

- 800 tonnes-per-day concentrator consisting of equipment and installations for crushing,

grinding, flotation, and filtration

- Assay laboratory with separate areas for sample preparation, drying, weighing, wet assaying, fire assaying, atomic absorption, and mill process testing
- Electrical-mechanical workshop
- Secured hazardous waste areas for the temporary storage of used oil, solids impregnated with petroleum products, batteries, empty cyanide containers, empty acid containers, and empty paint containers
- A 2,400-tonne capacity stockpiling area for coarse mineralized material
- A 300-tonne capacity lead concentrate storage area
- A 300-tonne capacity zinc concentrate storage area
- Process water supply pumping and storage system
- Surface facilities housing compressors and electrical substations
- Two tailings management facilities (one in operation, the other decommissioned and closed and rehabilitated with a soil cover)
- Two-story administration building
- Primary warehouse for the mill
- Core shed and
- Site security offices

History

Limited and small-scale mining has been conducted in the area prior to the 1960s, although no records of the early history of prospecting and mining in the Platosa area are known to exist. Small-scale mining was carried out at Platosa sporadically from that period up to the 1970s by a local family. Production from Platosa prior to 1970 is estimated to be in the range of 25,000 to 50,000 tonnes even though production records are poor.

Excellon acquired the concession hosting the historical Platosa mine in 1997 and staked the surrounding Excelmex and Poeta concessions in 2004. At approximately the same time, Apex Silver (Apex) staked the adjacent Saltillera property. Both companies conducted reconnaissance mapping and sampling through 1997. In 1998, Apex optioned the Platosa Property from Excellon and in 2001 Excellon reassumed control of the property from Apex.

Geology

The Platosa Property lies in the Sierra Bermejillo, a northwest-trending anticline-syncline pair developed in Mesozoic sedimentary rocks. The Sierra Bermejillo Anticline is a relatively open fold that plunges to the southeast. The Saltillera Syncline is a doubly plunging structure located west of the anticline. The folded sequence is cut by a set of north- to northwest-striking, steeply dipping fractures and faults. Tertiary felsic to intermediate dykes and plutons intrude these structures in the western part of the Sierra Bermejillo.

The principal fault system in the property area is the Platosa Structural Zone (PSZ), a 250 to 1,500- metre-wide northwest-trending zone of fracturing and shearing that traverses the eastern margin of the Sierra Bermejillo. The PSZ includes a series of fault planes that strike north–northwesterly and dip steeply east;

it has been mapped along strike for five kilometres northwest and southeast of the Platosa mine. It is characterized by brecciated, crushed, and dolomitized limestone; slickenside fracture surfaces; iron and manganese oxides; travertine-filled breccias; and coarsely crystalline selenite veins, some up to five metres thick. The faulted rocks weather recessively and create a negative topographic expression of the PSZ.

Mineralization

The bulk of mineralization currently defined on the Platosa project occurs as shallow to steeply dipping bodies of massive carbonate-replacement deposits (CRD). These bodies have been identified and categorized as discrete pods or mantos based on structural setting and concentration of sulphides.

The footprint of the Platosa manto system currently measures approximately 400 by 700 metres. Mantos at Platosa dip in accordance with the stratigraphy towards the east where a series of late extensional features down-drop the mineralization so that its depth ranges from 60 metres below surface on the west side of the mine to approximately 320 metres below surface at the NE-1 manto, on the east side of the mine.

The main lead-, zinc-, and silver-bearing minerals are:

- Galena (main lead-bearing mineral)
- Sphalerite (main zinc-bearing mineral)
- Acanthite and lesser proustite (main silver-bearing minerals). Acanthite is predominant; proustite is visible where grades typically exceed the average grade of the mineralized body.

These deposits are hosted in carbonate rocks, distal to felsic intrusions that are interpreted to provide the hydrothermal source of mineralizing fluids. Deposits are characterized by irregularly shaped pods, lenses, and roughly tabular or tubular masses of massive sulphide mineralization. Discordant bodies (chimneys) and roughly concordant elongate masses (mantos) can extend for thousands of metres from the source of the mineralizing fluids and often follow complex disjointed paths through the host rocks.

The massive sulphide bodies commonly grade progressively into mineralized metasomatic skarn deposits proximal to the source intrusions. This proximal mineralization includes skarns developed along fractures, dykes and sill contacts, and as large irregular lenses at the contact with the intrusion. Locally, mineralized veins cut both the skarns and host intrusions. Contact metamorphic features (recrystallization to marble, development of hornfels and skarnoid) commonly occurs peripheral to the skarn zone. Skarnoid mineralization and indications of skarnoid or intrusion related mineralization have been noted at various targets on the project including, Saltillera, at depth below Platosa and most notable to date at Rincon del Caido. Other Skarn type targets on the property include the conceptual PDN target approximately 1.7 km north of the Platosa deposit.

All aspects of CRD and skarn mineralization are controlled by local and regional structures such as faults, fractures, contacts, fold axes, and collapse (paleokarst) zones. Secondary host rock permeability (such as fractures, breccias, solution cavities, dolomitization) can also be an important controlling factor for mineralization (Megaw et al. 1988).

Limited exploration was performed between 2014 and 2016. A thorough and comprehensive review of data and historical programs was performed in 2016 and into 2017. Excellon recommenced exploration work on the Platosa Property in mid-2016; this included drilling, prospecting, sampling, and mapping. The surface drilling was suspended in 2017 pending financing and the completion of capital projects at the mine. During this time, other surface exploration work programs continued, as well as underground infill

and definition drilling. At the end of 2017, Excellon recommenced surface drilling which continued through 2018 and will continue into 2019.

Exploration

To December 31, 2018, a total of 370,348 metres in 1,601 diamond drill holes had been completed at the Platosa Property from surface and from underground. Additional diamond drilling is recommended to explore for new high-grade manto CRD sulphides similar to that currently being mined at Platosa, and for the a high-tonnage intrusive-related CRD deposit, which may represent the source of the mantos.

Sampling Method and Approach

Core is moved from the drill site to a covered core handling facility located north of the mine. Excellon geologists log the core and mark sample intervals. All drill core is then photographed. Geologists select sample intervals to reflect lithologic, structural, or mineralization boundaries. Sample identifiers are marked directly on the core and core box. Sample lengths are limited to a maximum of 1.5 m in mineralized sections and 3.0 m in wall rocks. Once samples are selected, they are cut with a diamond saw with one half of the core sent to the lab and the other retained in the core box. Unconsolidated material is split with a spatula. The half-core samples are collected in plastic bags for shipment to the laboratory. The remaining half is retained and stored at the Platosa site warehouse for future reference. Standards and blanks are inserted, as part of an industry best practice QAQC program into each sample batch of samples.

Groups of thirty to fifty samples are placed in sealed bags for shipping. A list of samples in each sealed bag is submitted to the laboratory along with the sample list in each bag. The samples are trucked to the SGS laboratory in Durango by Excellon personnel.

No other sample preparation is carried out by Excellon personnel. The sampling procedures meet standard industry best practice and are appropriate for the deposit type.

Sample Preparation and Analysis

Samples are sent to SGS Mineral Services (SGS) in Durango for preparation and analysis for silver, gold, lead, zinc. Multi-element analysis is also conducted on the core. In the fall of 2009, the Durango laboratory received accreditation to ISO/IEC 17025. SGS is a reputable international laboratory that provides analytical services to the mining and mineral exploration industry worldwide. Assay certificates are sent to company representatives who check QAQC results to assess accuracy of analysis before results are integrated into the company database.

Drill core samples are prepared using the following protocol:

- Air dry if possible; maximum 120 degrees Celsius if oven-drying is necessary
- Crush entire sample to greater than 90 percent passing 2 millimetres
- Riffle split 250 grams
- Pulverize 250 grams to greater than 90 percent passing 75 microns

Drill core samples used for mineral resource estimation have been analyzed for 33 elements including silver, lead, and zinc using a four-acid leach method followed by Inductively Coupled Plasma - Atomic Emission Spectroscopy (ICP-AES) determination (ICP40B).

High-grade samples, with silver greater than 100 g/t and lead and zinc greater than 1 percent, are analyzed a second time using a fire assay with gravimetric finish for silver and a sodium peroxide fusion with ICP-

AES finish (ICP90Q) for lead and zinc. If necessary, lead and zinc may be measured using titration if the quantity exceeds the upper limit of 30 percent.

Security

The drilling, sampling and logging are done under the supervision of experienced technical personnel. Logged and sampled drill core is stored in a fenced and access-controlled area of the Platosa mine site. The core boxes are labelled, and depth markers are inserted at appropriate intervals.

Assay Quality Assurance and Quality Control (QA/QC)

Excellon continues to follow industry best practices for lab and sample QAQC, which involves the systematic insertion of blanks, standards and duplicate samples into the sample stream and monitoring the results for potential contamination and bias.

Excellon engaged Analytical Solutions Limited (ASL) in February 2018 to prepare an independent report related to the performance of Excellon's 2014 to 2018 quality control program. A total of approximately 3,800 samples (including quality control samples) from the Platosa mine were collected and assayed between January 2014 and April 2018.

The low rate of silver, lead, and zinc quality control failures for blanks indicates that sample cross-contamination in preparation and analysis is well controlled and not a risk for the project. The low levels of silver, lead, or zinc are assumed to be part of the background values of the limestone.

Data Verification

In accordance with NI 43-101 guidelines, several members of the SRK team visited the Platosa mine and Miguel Auza Mill.

Mr. Blair Hrabí visited the site from April 24 to 28, 2017. The main purpose of this site visit was to assist with the 3-D fault modelling for the mine and also to investigate the geological and structural controls on the distribution of the gold mineralization in order to aid the construction of three-dimensional gold mineralization domains. While on site, Mr. Hrabí mapped underground in the Manto Rodilla, Manto 6A, and Guadalupe South areas; mapped surface exposures for one-half day; and examined representative drill core from 11 drill holes. Existing underground mapping of structural features and the distribution of the mineralized domains was generally accurate and representative. No verification of underground face or channel samples was made. The drill hole logs accurately reflect the geology observed in drill core in almost all cases. No verification of drill hole locations or survey accuracy was made by SRK during this site visit.

Mr. Sebastien Bernier visited the Platosa mine from January 30 to 31, 2018. The purpose of Mr. Bernier's site visit was to review the digitization of the exploration database and validation procedures, review exploration procedures, define geological modelling procedures, examine drill core, interview project personnel, and collect all relevant information for the preparation of an updated mineral resource model and the compilation of a technical report. During the visit, particular attention was given to the treatment and validation of historical drilling data. In the opinion of the Qualified Persons, the sample preparation, security, and analytical procedures for all assay data for 2014 to 2018 are adequate to support mineral resource estimation.

Mineral Resources

The mineral resources reported in the SRK report considers drilling information available to March 31, 2018 and were evaluated using a geostatistical block modelling approach constrained by polymetallic

mineralization wireframes. Criteria used in the selection of block size included the drill hole spacing, composite assay length, the geometry of the modelled zones, and the current/future underground mining technique. Block size was block 5 by 5 by 2 metres for all mantos. Subcells, at 0.25 metre resolution, were used to honour the geometry of the modelled mantos.

The estimate of Mineral Resources is provided in Table 1-2.

**TABLE 1-2 MINERAL RESOURCE ESTIMATE SUMMARY
AS OF MARCH 31, 2018
Platosa Mine**

Category	Tonnes (t)	Ag (g/t)	Pb (%)	Zn (%)	AgEq (g/t)	Contained Ag (oz)	Contained Pb (lb)	Contained Zn (lb)	Contained AgEq (oz)
Measured	-	-	-	-	-	-	-	-	-
Indicated	485,000	549	5.6	5.9	1,055	8,562,000	59,752,000	62,953,000	16,456,000
Total	485,000	549	5.6	5.9	1,055	8,562,000	59,752,000	62,953,000	16,456,000
Inferred	13,000	516	4.7	6.5	1,014	216,000	1,344,000	1,859,000	426,000

Notes:

- (1) Mineral Resources are estimated pursuant to NI 43-101 with an effective date of March 31, 2018.
- (2) Mineral Resources are estimated at a cutoff grade of 375 g/t AgEq and silver, lead and zinc prices of US\$17.00, US\$1.10 and US\$1.30, and assuming metal recoveries of 89% for silver and 81% for lead and zinc respectively.
- (3) This Mineral Resource Estimate was prepared under the supervision of Sébastien Bernier, Principal Resource Geologist at SRK Consulting (Canada). Mr. Bernier is a Qualified Person as defined in NI 43-101.
- (4) All figures have been rounded to reflect the relative accuracy of the estimates.
- (5) Mineral Resources that are not Mineral Reserves do not necessarily demonstrate economic viability. The Mineral Resources reported herein have been estimated using a geostatistical block modelling approach informed from silver, lead and zinc assay data collected in core borehole samples. The construction of the Mineral Resource model was a collaborative effort between Excellon and SRK personnel. The construction and methodology for the creation of the resource wireframes was overseen by Blair Hrabi of SRK, P.Ge. (APGO #1723) and geostatistical analysis, variography, mineral resource evaluation and classification were undertaken by Sébastien Bernier of SRK, P.Ge. (APGO #1847). All technical work was reviewed by Ben Pullinger, SVP Geology of Excellon (APGO #2420).

Mineral Reserves

There is currently no mineral reserve estimate to report at the Platosa mine. Excellon does not consider the release of mineral reserves to be appropriate at this time due to the constraints of dewatering in advance of mining and development and the consequent limitation on increasing definition drilling to prepare such reserve estimate. Definition and infill drilling completed to date is satisfactory for mineral resources and the transition from room and pillar to cut and fill mining method is ongoing.

Mining methods

The primary mining method has historically been a modified room and pillar, with the top of the manto being accessed first. For steeply dipping mantos, the area is benched down to a maximum height of 20 metres at which point a sill pillar is established. This process is repeated below the sill pillar until the bottom of the manto is reached. Historically, sill pillars were seldom necessary considering the flat-lying nature of the mantos, although these will become necessary where the mineralized body dips more steeply.

In 2018, Platosa transitioned the mining method to a cut and fill/drift and fill to increase the mining recovery. Engineering was completed for the construction of sill mattresses composed of cemented rock fill (CRF) to eliminate the need for sill pillars in the future.

Primary stope accesses for cut-and-fill are driven into the deposit on a 15 percent decline. The bottom cut is mined, and the area is then backfilled with waste rock to facilitate extraction of the next cut. This

sequence is repeated up to five times until the stope access reaches an incline of 15 percent. Access to the next cut is then provided by a 15 percent decline driven from a higher elevation. The mine plan anticipates that the cut and fill stopes will be backfilled with unconsolidated development waste, except for where a sill mat will be required when mining will occur directly below. Development waste from active headings as well as waste that has been stockpiled underground will be used to backfill the cut and fill stopes.

Historical pillars are being extracted, with previously mined areas supported with cable bolts. Each area is evaluated individually based on the rock quality and economic viability.

The completion of the dewatering project has allowed Platosa to increase mechanization. Jacklegs have been replaced with jumbos in certain production areas, improving safety and productivity. Platform bolting drills were purchased in 2018 to improve the safety and productivity of installing ground support compared to current methods using handheld drills.

Mineralized material is hauled to surface using one 20-tonne haul truck and three 16-tonne haul trucks. The mineralized material is placed at surface at either the low-grade or high-grade stockpile. A wheel loader transfers the material from the stockpiles into the crusher; the material is then crushed to less than 25 millimetres. The crusher is equipped with a stacker conveyor that permits loading of the crushed material directly into haul trucks or can divert it on the ground if a truck is not available. The crushed material is hauled in 40-tonne covered trucks to the mineral processing facility located at Miguel Auza, 220 kilometres away.

Mineral Processing

The Miguel Auza Mill has been treating silver-, lead-, and zinc-rich CRD Platosa mineralization since 2009. The facility was initially designed and constructed to process material from the lower-grade Miguel Auza mine at a rate of 650 tonnes per day with a regrind mill adding an additional 150 tonnes per day of capacity. Modifications were made in 2009 to ensure that the facility would be able to process the higher-grade feed from Platosa; the flotation cells operated at 325 to 350 tonnes per day since that time. The Miguel Auza Mill currently produces two concentrates: a lead-silver and a zinc concentrate.

The Company entered a toll milling arrangement in Q1 2018 with Hecla to process ore from the San Sebastian Mine, 42 kilometres northwest of the Miguel Auza Mill. The bulk sample was recently increased to 25,000 tonnes, which began arriving at site in late Q1 2019 with processing to commence in early Q2 2019. Assuming successful results from the bulk sample, the formal commercial milling arrangement will commence in due course. Preparations for the expansion of milling operations at Miguel Auza are well underway and the Company engaged consultants to review and propose upgrades to milling performance during Q3 2018. This review recommended optimizations to the mill flow sheet that are currently being commissioned. Metallurgical recoveries and concentrate grades for the remaining life of mine plan have been estimated based on actual and historical processing facility performance results, with the new flow sheet to be integrated into life-of-mine planning during 2019.

There are two tailings management facilities (TMF) at Miguel Auza. TMF #1 reached capacity in December 2017 and was decommissioned in October 2018 after having reached its final crest height of 6.52 m and design capacity of approximately 313,000 m³ (~520,000 tonnes) of tailings. Covering of the decommissioned TMF #1 with soil was completed in the fourth quarter of 2018. TMF #2 will be constructed in five stages as capacity is required. Construction of the first stage of the facility was largely completed by the end of the third quarter of 2017 and consists of a 6 m centreline embankment with a low permeability core and rockfill shell. First tailings from the concentrator were routed to TMF #2 in the fourth quarter of 2017. The first stage of TMF #2 is designed to store approximately 207,000 tonnes of

tailings. The final approved design capacity of TMF #2 once all five stages are constructed is anticipated to be approximately 1.66 million tonnes, representing 19 years of production at an average rate of 300 tonnes of ore per day. The final design crest height of the embankment will be 16 metres. A review of both TMFs and our tailings management practices was conducted by an independent third-party consultant late in Q1 2019.

Market Studies

The principal commodities at Platosa are freely traded, at prices that are widely known, so that prospects for sale of any production are virtually assured.

The concentrates produced from the Platosa deposit are of marketable grade and do not contain any deleterious elements or contaminants which would limit the number of smelters capable of processing the concentrates.

Excellon currently has sales contracts for concentrate in place with Trafigura Mexico, S.A. de C.V. (Trafigura), a subsidiary within the Trafigura group of companies, and MK Metal Trading Mexico (MK Metals), S.A. de C.V., a subsidiary within the Ocean Partners group of companies.

Environmental, Permitting and Social Considerations

Mining at Platosa is carried out under the permit *Planta de beneficio y presa de jales de la Unidad La Platosa* (Concentrator and tailings dam of the Platosa area), which was received in 2008. The permit allowed the construction and operation of both a concentrator and tailings management facility (TMF) at Platosa. The permit expires in 2023 but can be renewed, and requires Excellon to prepare and submit an annual report describing the mining-related activities, including any increases in production.

The environmental approval for Platosa is the *Licencia Ambiental Unica* (Consolidated Environmental Licence), issued in 2013 by SEMARNAT (*Secretaria de Medio Ambiente y Recursos Naturales*, Mexico's environment ministry) to regulate emissions from the crushing plant and the storage and disposal of solid and hazardous waste. The permit has no expiration date and must be modified if there are significant changes to emissions or to the generation of hazardous waste. The Consolidated Environmental Licence requires the installation of dust collector (baghouse) facilities in the crushing area at Platosa. Resources to design and install these facilities are included in the 2019 budget.

The primary environmental aspect at Platosa is water discharge and management. Water from the underground workings is considered to be "mining water" under Mexican mining rules. Such discharge is regulated under general mining law and does not require a permit. The discharge water is pumped to a series of holding ponds before being routed by pipeline and open canals to neighbouring properties where it is dispersed via irrigation by third parties.

A small area of mine-related waste is located on surface adjacent to the mine portal; there are no acid drainage-related concerns with this material because of lack of rainfall and the buffering effect of carbonate host rocks.

Platosa holds additional operating and exploration permits that cover a range of matters and activities regulated under Mexican law; these are listed in Table 1.

Excellon conducts exploration drilling in the near-mine area to locate additional mineralization that could be exploited by the current Platosa workings. In addition, Excellon is conducting regional exploration in the Platosa area, outside of the current mine workings. Where it does not own the surface rights, Excellon

has permission from surface rights holders to perform exploration activity. SEMARNAT regulates these activities and approves the location of drill sites. Excellon has performed investigations in areas where exploration activities are active to identify any potential environmental components that require special attention. Flora from drill pads are inventoried, harvested and replanted in other areas. The relevant exploration permits are listed in Table 1.

Mineral concentration related activities at the Miguel Auza Mill were approved in the 2005 Approval of Environmental Impact Statement. The approval references other required permits and obliges Excellon to comply with the conditions of all associated permits for it to remain in force. The Miguel Auza Mill holds a number of additional operating permits that cover a range of matters and activities regulated under Mexican law (Table 2).

Table 1. Permits at Platosa.

Permit type	Area included	Effective date	Expiry date	Comments
Resolution of Environmental Impact for TMF and concentrator	Platosa	09/12/08	09/22/2023	
Unified Environmental License	Land disturbance at Platosa	2013	N/A	No expiration date; significant operational changes require modification
Land use	2014 exploration project	02/09/15	02/09/20	
Environmental Impact Preventative Report	2017 La Platosa exploration project	11/27/17	11/27/21	
	El Poeta and Excelmex exploration project	07/11/18	07/11/20	
	Jaboncillo exploration project	01/28/19	01/28/22	
Solid and hazardous waste	Solid waste deposition in Bermejillo municipal landfill	03/27/19	12/31/19	
Explosives use	Explosives magazine	01/01/19	12/31/19	Permit renewed annually and permission to purchase explosives renewed quarterly

Environmental Monitoring at Platosa

Environmental aspects at Platosa are largely overseen by PROFEPA (SEMARNAT’s technical and enforcement branch) and CONAGUA. Inspections by both agencies take place on a periodic basis: CONAGUA for water-related matters and PROFEPA for a wider range of environmental issues.

Environmental monitoring at Platosa consists of semi-monthly monitoring of water pumped from the underground workings. This monitoring is done by an independent third party at six monitoring locations:

- Two at surface pump stations
- One on surface at an Excellon-owned ranch
- Three at third-party-owned ranches located east (downgradient) of Platosa

Water quality samples are collected by third parties, are submitted to an independent and qualified third-party laboratory, and are analyzed for a series of elements as required by Mexican regulations. Analytical results for water pumped from the underground workings and from local ranches demonstrate that the water meets Mexican agricultural water quality guidelines.

Air quality monitoring is performed annually at four locations around the perimeter of the facilities at Platosa. Monitoring is performed by third-parties.

Mineral concentration-related activities at the Miguel Auza Mill were approved in the Approval of Environmental Impact Statement in 2005. The approval references other required permits and obliges Excellon to comply with the conditions of all associated permits to remain in force. The Miguel Auza Mill holds a number of additional operating permits (Table 2) that cover a range of matters and activities regulated under Mexican law.

Table 2. Permits at Miguel Auza Mill.

Permit type	Area included	Effective date	Expiry date	Comments
Environmental Impact Statement/Declaration of Environmental Impact	Concentrator, TMF #1, u/g ramp	09/26/05	09/01/26	Renewal processed for an additional ten years in 2016.
	Concentrator, TMF #1, u/g ramp	09/01/16	09/01/26	
	TMF #2	01/30/17	09/30/47	
Land use	Concentrator, TMF #1, u/g ramp	09/09/05	09/09/06	Permit issued for one year to approve impact to land. SEMARNAT notified that impact had occurred. No renewal required.
Water withdrawal/use		08/16/98	08/16/28	
Water discharge		01/26/08	01/26/28	
Air quality/emissions	LAU (Todos los procesos, productos)	10/25/13	Indeterminate	
Solid and hazardous waste	Hazardous waste at all areas of the operation	09/22/11	No expiry	
	Solid waste at all areas of the operations	09/09/17	Every change in municipal government	
	Special waste at all areas of the operation	06/15/18	09/15/19	

Permit type	Area included	Effective date	Expiry date	Comments
Mine waste	Mine waste, u/g ramp, tailings	To be determined	New permit will not have an expiry date	Reauthorization is in progress.
Chemicals storage and use	Laboratory, concentrator warehouse, office warehouse			General duty permit requiring compliance with SEMARNAT Nom 005.
Explosives	Explosives magazine			No explosives on site. Annual permit was renewed in January 2018 and we continue to send monthly reports to SEDENA indicating no explosives are on site.
Exploration				Geological mapping activities only; permission required prior to drilling.
Closure plan approval	Concentrator, TMF #1, u/g ramp	04/22/16	No requirement	EXN update completed December 2017.
	TMF #2	01/29/18	No requirement	Closure plan and cost estimate for TMF #2 submitted to SEMARNAT 01/29/18.
Financial assurance	TMF #2	03/30/17	04/02/2018	Preparing update.

Environmental Monitoring at Miguel Auza

Some of the permits held by the Miguel Auza Mill have ongoing monitoring requirements, primarily those permits that address specific environmental media. The water-use permit requires that water be controlled and that reports be provided to the regulatory agency on a quarterly basis. The operation certificate requires that the Miguel Auza Mill prepare and submit an annual report that inventories emissions to air and the quantities of hazardous waste that are generated.

The Miguel Auza Mill has made many process improvements over the past few years to reduce the exposure to workplace hazards and to reduce emissions to the environment; these include placing covers on all conveyors, storing concentrate on a concrete area, and improving housekeeping. These efforts resulted in the Miguel Auza Mill receiving the Certification of Clean Industry by PROFEPA for achieving Environmental Performance Level 1 in July 2017. A recertification process is underway and is expected to be completed in 2019.

Closure and Rehabilitation

Closure plans are in place for both the Platosa mine site and the Miguel Auza Mill site; both plans meet the legal requirements imposed by Mexico and were reviewed and updated in December 2017 by third-party consultants with local experience in mine closure.

Closure at both sites will meet all applicable Mexican legal requirements and the requirements of Excellon's closure standard, which contains requirements that exceed local legal requirements. The primary activities will consist of the following steps:

- Demolition of facilities

- Disposal of solid and hazardous wastes according to legal requirements
- Regrading and stabilization of land
- Proper closure of all portals, ventilation raises
- Re-vegetation
- Monitoring of water and air quality and the stability of tailings management facilities for five years post-closure

Locally derived soil was used to cover TMF #1 to prevent the generation of fugitive dust and to promote sustainable revegetation.

No posting of financial assurance is required for Platosa. The Miguel Auza Mill has posted a bond of MXP\$1,178,000 (approximately US\$60,000) financial assurance for the closure of TMF #2. The financial assurance amount is currently being updated and is based on data submitted by Excellon; it reflects local costs to close such facilities. Financial assurance is not required for the concentrator area, Miguel Auza ramp, and TMF#1.

Optimization Plan

The Platosa deposit comprises several high-grade massive sulphide mantos hosted in permeable limestone and has been mined by Excellon since 2005. In 2007, as mine workings extended below the local water table, the Company began an intensive program of reactive grouting and pumping to control and prevent water inflows. This program has been effective in managing inflows, but has been time-, labour- and cost-intensive, which has historically limited production to significantly less than 200 tpd.

In late 2014, the Company engaged Hydro-Ressources Inc. and Technosub Inc. of Quebec, Canada to investigate alternative water management solutions through which mine operations could achieve consistent, increased production rates and lower costs. In April 2015, the Company released the results of a hydrogeological study prepared by Hydro-Ressources and Technosub (the “Optimization Plan”), which confirmed that dry mining conditions are achievable at Platosa and which proposed to replace the grouting and pumping process with a more efficient and permanent dewatering system. The Optimization Plan was further revised in November 2015, with the primary revision being a decrease in the initial capital required to implement the program.

Description of the Optimization Plan

In April 2015, the Company released the results of a hydrogeological study prepared by Hydro-Ressources Inc. and Technosub Inc. (the “Optimization Plan”), which confirmed that dry mining conditions are achievable at Platosa and proposed to replace the grouting and pumping process with a more efficient and permanent dewatering system to deepen the cone-of-depression in the water table around mine-workings.

Preliminary pumping with the new dewatering system commenced in late summer 2016; increased pumping rates immediately increased the rate of deepening of the cone of depression (drawdown trend). The system was fully commissioned in Q2 2017, at which time pumping rates and drawdown increased materially, resulting in dry mining conditions and elimination of the need for grouting procedures by June 2017.

The dewatering system requires regular monitoring and periodic installation of new underground wells as

mining operations deepen and as existing underground wells become less efficient (i.e., the water table deepens beyond a particular pump's effective depth). Additionally, ongoing monitoring of dispersion of surface water storage and conveyance facilities is necessary to prevent either direct recharge into the aquifer formation or intensive seepage from local holding ponds, both of which were noted as negatively impacting drawdown rates in late 2017.

The current Platosa life-of-mine plan is predicated on deepening of the cone of depression 4.0 metres per month; optimal mining rates are associated with higher rates of drawdown. Refer to "Risk Factors – Failure to Achieve Production Estimates", below. The Company commenced the second phase of the Optimization Plan ("Optimization Plan Phase 2") during H2 2017, which is the ordinary course maintenance and expansion of the dewatering system going forward for life of mine and is essential to ensure requisite rates of drawdown and efficient mining practices. Phase 2 consists of the periodic development of new well bays and the drilling of new wells, with submersible pumps being moved to the new wells as wells at higher elevation begin to lose pumping efficiency. Capital expenditures on Phase 2 are considered sustaining, primarily relating to well bay development, well drilling and the periodic addition/replacement of existing pump equipment.

RISK FACTORS

An investment in the Common Shares involves a high degree of risk and must be considered speculative due to the many risk factors facing companies in the mining industry that could materially affect the Company. Certain of such risks are:

Fluctuation of Metal Prices

Even if commercial quantities of mineral deposits are discovered, there is no guarantee that a profitable market will exist for the sale of the metals produced. Factors beyond the control of the Company may affect the marketability of any substances discovered. The prices of various metals have experienced significant movement over short periods of time and are affected by numerous factors beyond the control of the Company, including international economic and political trends, expectations of inflation, currency exchange fluctuations, interest rates and global or regional consumption patterns, speculative activities and increased production due to improved mining and production methods. The supply of and demand for metals are affected by various factors, including political events, economic conditions and production costs in major producing regions. There can be no assurance that the price of any minerals contained in a deposit will be such that the Company's properties can be mined at a profit. The Company is particularly exposed to the risk of movement in the price of silver. Declining market prices for silver could have a material effect on the Company's profitability, and the Company's policy is not to hedge its exposure to silver.

No Assurance of Profitability

The Company has a limited history of earnings and due to the nature of its business there can be no assurance that the Company will be profitable. The Company has not paid dividends on its Common Shares since incorporation and does not anticipate doing so in the foreseeable future. The only present source of funds available to the Company is from the anticipated cash flow generated by the Company's mining activities at the Platosa Property or through the sale of its equity shares, short-term high-cost borrowing, or the sale or optioning of a portion of its interest in its mineral properties. Even if the results of exploration are encouraging, the Company may not have sufficient funds to conduct the further exploration that may be necessary to determine whether or not a commercially mineable deposit exists.

While the Company may generate additional working capital through cash flow from mining operations, further equity offerings, short-term borrowing or through the sale or possible syndication of its properties, there is no assurance that any such funds will be available on favourable terms, or at all. At present, it is impossible to determine what amounts of additional funds, if any, may be required. Failure to raise such additional capital could put the continued viability of the Company at risk.

Resource Exploration and Development is a Speculative Business

Resource exploration and development is a speculative business and involves a high degree of risk, including, among other things, unprofitable efforts resulting not only from the failure to discover mineral deposits but from finding mineral deposits which, though present, are insufficient in size to return a profit from production. The marketability of natural resources that may be acquired or discovered by the Company will be affected by numerous factors beyond the control of the Company. These factors include market fluctuations, the proximity and capacity of natural resource markets, and government regulations, including regulations relating to prices, taxes, royalties, land use, importing and exporting of minerals and environmental protection. The exact effect of these factors cannot be accurately predicted, but the combination of these factors may result in the Company not receiving an adequate return on invested capital. The majority of exploration projects do not result in the discovery of commercially mineable deposits of ore.

Dependence on Operations in Mexico

The Company's operations at the Platosa Property and the Miguel Auza Mill in Mexico is expected to account for all of the Company's production in 2019 and will continue to account for all of the Company's commercial production until such time as any other potential mines on the Company's properties are developed and placed into commercial production, or the Company makes an acquisition of a producing mine. Any adverse condition affecting mining or milling conditions at the Platosa mine or the Miguel Auza Mill could be expected to have a material adverse effect on the Company's financial performance and results of operations. The Company also anticipates using revenue generated by its operations at Platosa to finance a substantial portion of the capital expenditures required for its exploration activities. Unless the Company can successfully develop and bring into production other mineral projects on its existing properties or otherwise acquire mineral-producing assets, the Company will be dependent on Platosa for its commercial production. Further, there can be no assurance that the Company's current exploration and development programs at its projects will result in any new economically viable mining operations or yield new mineral resources to replace and expand current mineral resources.

Failure to Achieve Production Estimates

Estimates of future production from the Platosa Property operations as a whole are derived from a mine plan prepared by Platosa's engineering staff on an annual basis and adjusted during the year to reflect conditions encountered during underground development and mining activities. These plans are reviewed by senior management and are subject to change. The Company cannot give any assurance that it will achieve its production estimates. The failure to achieve the anticipated production estimates could have a material and adverse effect on any or all of the Company's future cash flows, results of operation and financial condition. The mine plan has been developed based on, among other things, mining experience, Mineral Resource estimates, assumptions regarding ground conditions and physical characteristics of the Platosa mineralization (such as hardness, specific gravity and presence or absence of certain metallurgical characteristics) and estimated rates and costs of production.

Actual production may vary from estimates for a variety of reasons, including risks and hazards of the

types discussed above, and as set out below:

- actual ore mined varying from estimates in grade, tonnage and metallurgical recoveries and other characteristics;
- mining dilution;
- excessive water encountered during mine development and production;
- the inability to effectively or efficiently implement Optimization Plan Phase 2, as further described in “Description of the Optimization Plan,” above, resulting in delayed or economically unfeasible development and/or operating conditions;
- ramp wall failures or cave-ins;
- ventilation and adverse temperature levels underground;
- industrial accidents;
- equipment failures;
- natural phenomena such as inclement weather conditions, floods, blizzards, droughts, rock slides and earthquakes;
- encountering unusual or unexpected geological conditions;
- changes in power costs and potential power shortages;
- shortages of principal supplies needed for operation, including explosives, fuels, chemical reagents, water, equipment parts and lubricants;
- restrictions imposed by government agencies;
- labour shortages or strikes;
- civil disobedience and protests; and
- inability to find and retain qualified personnel.

Such occurrences could result in damage to mineral properties, interruptions in production, injury or death to persons, damage to the Company's property or the property of others, environmental damage, monetary losses and legal liabilities. These factors may cause a mineral deposit that has been mined profitably in the past to become unprofitable.

Failure to achieve estimates or material increases in costs

The Company prepares budgets and estimates of cash costs and capital costs of production for its operations and the main costs relate to material costs, workforce and contractor costs, energy costs and closure and reclamation costs. As a result of the substantial expenditures involved in the development of mineral projects and the fluctuation of costs over time, operations may be prone to material cost overruns. The Company's actual costs may vary from estimates for a variety of reasons, including short-term operating factors; revisions to mine plans; risks and hazards associated with mining; natural phenomena, such as inclement weather conditions, water availability, floods, and earthquakes; and unexpected labour issues, labour shortages, strikes or community blockades. Operational costs may also be affected by a variety of factors, including changing waste-to-ore ratios, ore grade metallurgy, labour costs, cost of commodities, general inflationary pressures and currency exchange rates. In late 2018, the Company experienced a significant increase in the price of electricity in Mexico. This increase had a materially negative impact on the Company's profitability during the period. Many of these factors are beyond the Company's control.

Uncertainty of Resource Estimates

The Company has engaged internal and expert independent technical consultants to advise it on, among

other things, Mineral Resources, geotechnical, metallurgy and project engineering. The Company believes that these experts are competent and that they have carried out their work in accordance with all internationally recognized industry standards. If, however, the work conducted by, and the Mineral Resource estimates of these experts are ultimately found to be incorrect or inadequate in any material respect, such events could materially and adversely affect the Company's future operations, cash flows, earnings, results of operations, financial condition and the economic viability of its projects.

The Mineral Resource estimates in respect of the Platosa Property are based on limited information acquired through drilling and, in some cases, through underground exploration and mining. No assurance can be given that the anticipated tonnages and grades will be achieved or that the indicated level of recovery will be realized. The grade of mineralization actually recovered may differ materially and adversely from the estimated average grades in the resource estimate. Future production could differ dramatically from resource estimates for, among others, the following reasons:

- mineralization or formations could be different from those predicted by drilling, sampling and similar examinations;
- increases in operating mining costs and processing costs could adversely affect Mineral Resources;
- the grade of the Mineral Resources may vary significantly from time to time and there is no assurance that any particular level of silver, lead or zinc may be recovered from the Mineral Resources; and
- declines in the market price of silver, lead or zinc may render the mining of some or all of the Mineral Resources uneconomic.

Any of these factors may require the Company to reduce its Mineral Resource estimates or increase its cost estimates. Short-term factors, such as the need for the additional development of a deposit or the processing of new different grades, may impair the Company's profitability. Should the market price of metals fall, the Company could be required to materially write down its investment in mining properties or delay or discontinue production or the development of new projects.

No Defined Mineral Reserves

The Company has not defined any Mineral Reserves on its concessions at the Platosa Property and there can be no assurance that any of the concessions under exploration contain commercial quantities of any minerals. Even if commercial quantities of minerals are identified, there can be no assurance that the Company will be able to exploit the resources or, if the Company is able to exploit them, that it will do so on a profitable basis. Substantial expenditures may be required to locate and establish Mineral Reserves, to develop metallurgical processes and to construct mining and processing facilities at a particular site, and substantial additional financing may be required. It is impossible to ensure that the exploration or development programs planned by the Company will result in a profitable commercial mining operation. The decision as to whether a particular property contains a commercial mineral deposit and should be brought into production will depend on the results of exploration programs and/or feasibility studies, and the recommendations of duly qualified engineers and geologists. Several significant factors will be considered, including, but not limited to: (i) the particular attributes of the deposit, such as size, grade and proximity to infrastructure; (ii) metal prices, which are highly cyclical; (iii) government regulations, including regulations relating to prices, taxes, royalties, land tenure, land use, importing and exporting of minerals and environmental protection; (iv) ongoing costs of production; and (v) availability and cost of additional funding. The exact effect of these factors cannot be accurately predicted, but the combination of these factors may result in the Company not receiving an adequate return on invested capital.

The Company is Dependent on Its Workforce at the Platosa Property and is Therefore Sensitive to Labour Disruptions

The Company is dependent on its workforce at its material producing property and mill operations in Mexico. The Company endeavours to maintain good relations with its workforce to minimize the possibility of strikes, lock-outs and other stoppages at the site. Relations between the Company and its employees may be impacted by changes in labour relations which may be introduced by, among other things, employee groups, competing labour unions, and the relevant governmental authorities in whose jurisdictions the Company carries on business.

During 2011 and 2012, operations at the Company's La Platosa mine were interrupted by illegal blockades and associated demonstrations relating to a campaign by competing unions to acquire control of Excellon's workforce. Certain of these demonstrations included participation by members of one local Ejido. The demonstrations impeded access by the Company's workforce to the mine resulting in lost days of production and, in respect of one interruption, an adverse impact on the financial results of the Company. Further labour disruptions at La Platosa mine could have a material adverse impact on the Company's business, results of operations and financial condition. During 2017 the Company began to strengthen its community relations processes to identify, map and engage stakeholders on a more regular basis. The Company believes these improvements will help maintain and enhance its relationships, especially with local communities, thereby reducing the likelihood of future production disruptions.

The Company's employees are represented by a labour union under a collective labour agreement. The Company may not be able to satisfactorily renegotiate the collective labour agreement when it expires. In addition, the existing labour agreement may not prevent a strike or work stoppage at our facilities in the future, and any such work stoppage could have a material adverse effect on the Company's earnings.

Surface Rights and Access

Although the Company acquires the rights to some or all of the minerals in the ground subject to the mineral tenures that it acquires, or has a right to acquire, in most cases it does not thereby acquire any rights to, or ownership of, the surface to the areas covered by its mineral tenures. In such cases, applicable mining laws usually provide for rights of access to the surface for the purpose of carrying on mining activities, however, the enforcement of such rights can be costly and time consuming. It is necessary to negotiate surface access or to purchase the surface rights if long-term access is required. There can be no guarantee that, despite having the right at law to access the surface and carry on mining activities, the Company will be able to negotiate satisfactory agreements with any such existing landowners/occupiers for such access or purchase of such surface rights, and therefore it may be unable to carry out planned mining activities. In addition, in circumstances where such access is denied, or no agreement can be reached, the Company may need to rely on the assistance of local officials or the courts in such jurisdiction, the outcomes of which cannot be predicted with any certainty. The inability of the Company to secure surface access or purchase required surface rights could materially and adversely affect the timing, cost or overall ability of the Company to develop any mineral deposits it may locate.

During Q3 2012, the Company sued the Ejido La Sierrita (the "Ejido") to terminate a 30-year surface rights agreement ("SRA") in respect of 1,100 hectares of exploration ground west and northwest of the Platosa Mine and for various damages relating to an illegal blockade of the mine during Q3 2012. The Ejido also sued for termination of the SRA after being advised of Excellon's suit.

In Q3 2016, the Company received a resolution from the Tribunal Unitario Agrario del Distrito Sexto in Torreón, Coahuila (the “**Agrarian Tribunal**”) on the legal action. The Agrarian Tribunal ruled in favour of the Company’s application to rescind the SRA. The Resolution also included (i) an award to Excellon of 5.5 million pesos payable by the Ejido for losses and damages related to the illegal blockade; and (ii) an award to the Ejido of 5.5 million pesos payable by Excellon as indemnity for not building a water treatment plant under the terms of the SRA. The two awards set-off against each other, with neither side being required to pay any amount to the other.

After appeal by both parties to the court of appeal in Coahuila, the case was returned to the Agrarian Tribunal. In Q3 2017, the Agrarian Tribunal once again ruled in favour of the Company, with the rescission of the SRA being upheld. The Court also eliminated the set-off in damages between the parties, with the end result being the simple rescission of the SRA. Both the Company and the Ejido have appealed this decision: the Company for payment of damages in respect of the illegal blockade of the mine in third quarter of 2012 and the Ejido for rental payments from 2014-2016.

Enforcement of Legal Rights

The Company's material subsidiaries are organized under the laws of foreign jurisdictions and certain of the Company's directors, management personnel and experts are located in foreign jurisdictions. Given that the Company's material assets and certain of its directors, management personnel and experts are located outside of Canada, investors may have difficulty in effecting service of process within Canada and collecting from or enforcing against the Company or its directors, officers and experts, any judgments obtained by the Canadian courts or Canadian securities regulatory authorities and predicated on the civil liability provisions of Canadian securities legislation or otherwise. Similarly, in the event a dispute arises from the Company's foreign operations, the Company may be subject to the exclusive jurisdiction of foreign courts or may not be successful in subjecting foreign persons to the jurisdictions of courts in Canada.

Security Considerations

The Company’s operations are located in Mexico, in the states of Durango and Zacatecas. Criminal activities in either region may disrupt operations, prevent the Company from hiring qualified personnel or impair the Company’s ability to access sources of capital. Risks associated with conducting business in the region include risks related to personnel safety and asset security. These risks may result in serious adverse consequences including, among other things, personal injury, crime related activity and disturbances, and damage or theft of Company property. Given the importance of operations in Durango and Zacatecas for the Company, such events resulting from criminal activity could have a material adverse effect on the Company’s cash flows, earnings, results of operations and financial condition, and make it more difficult for the Company to obtain any necessary financing. Although the Company has developed procedures regarding these risks, due to the unpredictable nature of criminal activities, there is no assurance that the Company’s efforts are able to effectively mitigate risks and safeguard personnel and Company property effectively.

In advance of the change in federal government in Mexico in December 2018, the Company recognized a deterioration in security around Miguel Auza, the location of the Company’s processing facility, including threats to certain of the Company’s employees. A preliminary investigation of these threats uncovered a scheme involving the theft of concentrate by criminal elements while in transit from Miguel Auza to Manzanillo from 2016 to October 2018. The amount and value of concentrate stolen remains uncertain;

however, it is currently estimated that scheme impacted the Company's revenues by approximately 10%. Investigations indicated that three employees were involved in facilitating and concealing the theft; these employees have been terminated. The Company retained experienced consultants to assist with investigations and developed an action plan to enhance the security footprint at Platosa and Miguel Auza and strengthen internal procedures. Additionally, the Company is working with Mexican authorities to improve security regionally around Miguel Auza. The underlying security situation in the area appears to have calmed. Nevertheless, the Company remains vigilant to protect the safety of its employees and contractors and to ensure its business is not further impacted.

Permits and Licenses

The operations of the Company require licenses and permits from various governmental authorities. The Company currently has all permits and licences that it believes are necessary to carry out its current exploration, development and mining operations at its projects including, without limitation, the permits required to construct and operate the Platosa mine and the Miguel Auza Mill. The Company may require additional licences or permits in the future and there can be no assurance that the Company will be able to obtain all such additional licenses and permits. In addition, there can be no assurance that any existing licences and permits will be renewable if and when required or that such existing licences and permits will not be revoked.

Mining Industry is Intensely Competitive

The Company's business is the acquisition, exploration, development, and exploitation of mineral properties. The mining industry is intensely competitive, and the Company competes with other companies that have far greater financial resources, more significant investments in capital equipment and mining infrastructure for the ongoing development, exploration and acquisition of mineral interests, as well as for the recruitment and retention of qualified employees.

Infrastructure

Mining, processing, development and exploration activities depend, to one degree or another, on adequate infrastructure. Reliable roads, bridges, power sources and water supply are important determinants, which affect capital and operating costs. Unusual or infrequent weather phenomena, sabotage, government or other interference in the maintenance or provision of such infrastructure, could adversely affect the Company's business.

Uninsured or Uninsurable Risks

In the course of exploration, development and production of mineral properties, several risks and, in particular, unexpected or unusual geological or operating conditions, may occur. It is not always possible to fully insure against such risks, and the Company may decide not to take out insurance against such risks as a result of high premiums or other reasons. Should such liabilities arise they could reduce or eliminate any future profitability and result in an increase in costs and a decline in value of the Common Shares.

Government Regulation

Any exploration, development or mining operations carried on by the Company will be subject to government legislation, policies and controls relating to prospecting, development, production, environmental protection, mining taxes, health and safety, and employment standards. As indicated above, the Company requires permits and licenses from a variety of governmental authorities. The Company's mining, exploration and development projects could be adversely affected by amendments to

such laws and regulations, by future laws and regulations, by more stringent enforcement of current laws and regulations, by changes in policies affecting foreign trade, investment, mining and repatriation of financial assets, by shifts in political attitudes and by exchange controls and currency fluctuations. The Company cannot predict the extent to which future legislation and regulation could cause additional expense, capital expenditures, restrictions, and delays in the development of its properties, including those with respect to unpatented mining claims. Further, there can be no assurance that the Company will be able to obtain or maintain all necessary licenses and permits that may be required to carry out exploration, development and mining operations at its projects.

Recent Reforms in Mexico

The Company's operations in Mexico are subject to Mexican federal and State laws and regulations. In 2013, the Mexican Congress approved a tax reform package, which came into effect on January 1, 2014. The tax reform includes, among other things, maintaining the current corporate tax rate of 30% (previously scheduled as 29% in 2014 and 28% in 2015), a broadened tax base, the elimination of the single rate business tax, the introduction of a 7.5% mining royalty on profits derived from the sale of minerals and the introduction of an extraordinary mining royalty of 0.5% on the gross income derived from the sale of precious metals. In addition, a new 10% withholding tax on dividend distributions to non-residents (subject to income tax treaty provisions) has been imposed at the distributing company level.

In December 2016, the Congress of Zacatecas approved the *Revenue Law for 2017*, effective as of January 1, 2017. The Revenue Law includes a new set of "Green Taxes" designed to increase tax revenue to be used for purposes of reducing the environmental impact of industrial activities carried out in the State. The new taxes must be paid no later than the first 17 days of the month succeeding the one in which the charges were incurred. The Green Taxes include: (i) Environmental Remediation Tax on the Extraction of Materials; (ii) Tax on Gas Emissions to the Atmosphere; (iii) Tax on Emissions of Pollutants to the Soil, Subsoil and Water; and (iv) Tax on the Disposal of Wastes.

In addition, the State has also raised the Tax for the Autonomous University of Zacatecas from 5% to 10%. This tax is due on the total amount of local duties and taxes paid by the taxpayers in Zacatecas, including Green Taxes. The tax reform applies on a prospective basis and therefore could have a material impact on the Company's future earnings and cash flows, and possibly on future capital investment decisions. In January 2017, the State of Zacatecas released a decree granting a 70% relief for all Green Taxes payable during 2017 (US\$110,000 paid). In 2018, a similar decree was issued again granting 70% relief for all Green taxes payable in 2018 (US\$136,000 paid). In 2019, another decree was issued granting only 25% relief for all Green taxes payable in 2018. In February 2019, the Company received a favorable resolution against the Green Tax for Environmental Remediation on the Extraction of Material. An appeal against the remaining Green Taxes (Tax on Gas Emissions to the Atmosphere; Tax Emissions of Pollutants to the Soil, Subsoil and Water; and Tax on the Disposal of Wastes) remains to be resolved.

The foregoing tax reforms apply on a prospective basis and therefore could have a material impact on the Company's future earnings and cash flows, and possibly on future capital investment decisions.

Environmental Matters

Existing and possible future environmental legislation, regulations and actions could cause significant expense, capital expenditures, restrictions and delays in the activities of the Company, the extent of which cannot be predicted, and which may well be beyond the capacity of the Company to fund. The Company's

right to exploit the mining properties is subject to various reporting requirements and to obtaining certain government approvals and there is no assurance that such approvals, including environmental approvals, will be obtained without inordinate delay or at all.

Environmental legislation is evolving in a manner which will require, in certain jurisdictions, stricter standards and enforcement, increased fines and penalties for non-compliance, more stringent environmental assessments of proposed projects and a heightened degree of responsibility for companies and their officers, directors and employees. No certainty exists that future changes in environmental regulation, if any, will not adversely affect the Company's operations or development properties. Environmental hazards may exist on the Company's properties which are unknown to management at present and which have been caused by previous owners or operators of the properties.

Failure to comply with applicable environmental laws, regulations and permitting requirements may result in enforcement actions thereunder, including orders issued by regulatory or judicial authorities causing operations to cease or be curtailed, and may include corrective measures requiring capital expenditures, installation of additional equipment, or remedial actions. Parties engaged in the exploration or development of exploration properties may be required to compensate those suffering loss or damage by reason of such parties' activities and may have civil or criminal fines or penalties imposed for violations of applicable laws or regulations.

Decommissioning and Site Rehabilitation Costs

During the year ended December 31, 2018, the Company re-assessed its reclamation costs at each of its mines based on updated mine life estimates, rehabilitation and closure plans. The total undiscounted amount of estimated cash flows required to settle the Company's obligations is MXN 39,299,000 (US\$1.9 million) of which MXN 18,727,000 (US\$1.0 million) of the reclamation obligation relates to the Platosa mine, and MXN 20,572,000 (US\$1.0 million) relates to the Miguel Auza mine. The present value of the reclamation liabilities, which has been discounted using a risk-free rate of 1.93%, may be subject to change based on management's current estimates, changes in the remediation technology or changes to applicable laws and regulations. Such changes will be recorded in the accounts of the Company as they occur.

The costs of performing the decommissioning and reclamation must be funded by the Company's operations. These costs can be significant and are subject to change. The Company cannot predict what level of decommissioning and reclamation may be required in the future by regulators. If the Company is required to comply with significant additional regulations or if the actual cost of future decommissioning and reclamation is significantly higher than current estimates, this could have an adverse impact on the Company's future cash flows, earnings, results of operations and financial condition.

Foreign Countries and Regulatory Requirement

The Company's projects and interests are located in Mexico, where mineral exploration and mining activities may be affected in varying degrees by political instability, economic conditions, expropriation or nationalization of property and changes in government regulations such as tax laws, business laws, environmental laws and mining laws, affecting the Company's business in these countries. Any changes in regulations or shifts in political conditions are beyond the control of the Company and may adversely affect its business, or if significant enough, may make it impossible to continue to operate in these countries. Operations may be affected in varying degrees by government regulations with respect to restrictions on production, price controls, foreign exchange restrictions, export controls, income taxes, expropriation of property, environmental legislation and mine safety.

Compliance with Anti-Corruption Laws

The Company's operations are governed by, and involve interaction with, many levels of government in Mexico. The Company is subject to various anti-corruption laws and regulations such as the Canadian Corruption of Foreign Public Officials Act, which prohibit a company and its employees or intermediaries from bribing or making improper payments to foreign officials or other persons to obtain or retain business or gain some other business advantage. The Platosa Mine and Miguel Auza Mill are located in Mexico and, according to Transparency International, Mexico is perceived as having fairly high levels of corruption relative to Canada. The Company cannot predict the nature, scope or effect of future regulatory requirements to which the Company's operations might be subject or the manner in which existing laws might be administered or interpreted.

Failure to comply with the applicable anti-corruption laws and regulations could expose the Company and its senior management to civil or criminal penalties or other sanctions, which could materially and adversely affect the Company's business, financial condition and results of operations. Likewise, any investigation of any alleged violations of the applicable anti-corruption legislation by Canadian or foreign authorities could also have an adverse impact on the Company's business, reputation, financial condition and results of operations. Although the Company has adopted policies to mitigate such risks, such measures may not be effective in ensuring that the Company, its employees or third-party agents will comply with such laws.

Dependence upon Others and Key Personnel

The success of the Company's operations will depend upon numerous factors, many of which are beyond the Company's control, including the ability to produce minerals; the ability to attract and retain additional key personnel in sales, marketing, technical support and finance; and the ability and the operating resources to develop and maintain the properties held by the Company. The Company hires employees or consultants in Mexico to assist it in conducting its operations in accordance with Mexican laws. The Company also purchases certain supplies and retains the services of various companies in Mexico to meet its business plans. It may be difficult to find or hire qualified people in the mining industry who are situated in Mexico or to obtain all the necessary services or expertise in Mexico or to conduct operations on its projects at reasonable rates. If qualified people and services or expertise cannot be obtained in Mexico, the Company may need to seek and obtain those services from people located outside Mexico, which will require work permits and compliance with applicable laws and could result in delays and higher costs to the Company to conduct its operations in Mexico. Recruiting and retaining qualified personnel is critical to the Company's success. The number of persons skilled in acquisition, exploration and development of mining properties is limited and competition for such persons is intense. As the Company's business activity grows, the Company will require additional key executive, financial, operational, administrative and mining personnel. Although the Company believes that it will be successful in attracting, training and retaining qualified personnel, there can be no assurance of such success. If the Company is not successful in attracting and training qualified personnel, the efficiency of its operations could be affected, which could have a material adverse effect on the Company's results of operations and profitability. The Company strongly depends on the business and technical expertise of its small group of management and key personnel. There is little possibility that this dependence will decrease in the near term. Key man life insurance is not in place on management and key personnel. If the services of the Company's management and key personnel were lost, it could have a material adverse effect on future operations.

Material Weakness in Financial Controls

During 2018, the Company identified material weaknesses in its disclosure controls and procedures (“DC&P”) and internal control over financial reporting (“ICFR”), as further described in the Financial Reports. Based on management’s assessment of such processes, the Company’s DC&P and ICFR were not effective as of December 31, 2018 due to such material weaknesses. If the Company fails to establish and maintain effective internal control over financial reporting in the future, the accuracy and timeliness of its financial reporting may be adversely affected, which could cause investors to lose confidence in the Company’s reported financial information and may lead to a decline in the trading price of the Common Shares.

The Company is developing and implementing procedures to address and remedy these material weaknesses. For more information, see “Internal Control over Financial Reporting and Disclosure Controls and Procedures,” in the MD&A.

Failure of Information Systems

The Company’s information systems, and those of its third-party service providers and vendors, are vulnerable to an increasing threat of continually evolving cybersecurity risks. These risks may take the form of malware, computer viruses, cyber threats, extortion, employee error, malfeasance, system errors or other types of risks, and may occur from inside or outside of our organization. Cybersecurity risk is increasingly difficult to identify and quantify and cannot be fully mitigated because of the rapid evolving nature of the threats, targets and consequences. Additionally, unauthorized parties may attempt to gain access to these systems or the Company’s information through fraud or other means of deceiving third-party service providers, employees or vendors. The Company’s operations depend, in part, on how well the Company and its suppliers protect networks, equipment, information technology (“IT”) systems and software against damage from a number of threats. The Company have entered into agreements with third parties for hardware, software, telecommunications and other services in connection with its operations. The Company’s operations and mining operations also depend on the timely maintenance, upgrade and replacement of networks, equipment, IT systems and software, as well as pre-emptive expenses to mitigate the risks of failures. However, if the Company is unable or delayed in maintaining, upgrading or replacing its IT systems and software, the risk of a cyber security incident could materially increase. Any of these and other events could result in information system failures, delays and/or increases in capital expenses. The failure of information systems or a component of information systems could, depending on the nature of any such failure, adversely impact the Company’s reputation and results of operations.

In addition, targeted attacks on the Company’s systems (or on systems of third parties that the Company relies on), failure or non-availability of a key IT system or a breach of security measures designed to protect the Company’s IT systems could result in disruptions to its operations through delays or the corruption and destructions of its data, extensive personal injury, property damage, loss of confidential information or financial or reputational risks. There can be no assurance that the Company’s ability to monitor for or mitigate cybersecurity risks will be fully effective, and the Company may fail to identify cybersecurity breaches or discover them in a timely way.

Currency Fluctuations

The Company maintains its accounts in Canadian, US dollars and Mexican pesos. The Company's operations are in Mexico and some of its payment commitments and exploration expenditures under the various agreements governing its rights to the Platosa and Evolución Properties are denominated in US dollars, making these rights subject to foreign currency fluctuations. Such fluctuations may materially affect the Company's financial position and results. The Company currently engages in hedging or price

protection programs to manage such risk.

Price Fluctuations and Share Price Volatility

In recent years, the securities markets in the United States and Canada have experienced a high level of price and volume volatility, and the market price of securities of many companies, particularly those considered development stage companies, have experienced wide fluctuations in price which have not necessarily been related to the operating performance, underlying asset values or prospects of such companies. There can be no assurance that continual severe fluctuations in price will not occur.

Liquidity and Financing Risks

Liquidity risk is the risk that the Company will not be able to meet its financial obligations as they fall due. The primary source of funds available to the Company has been cash flow generated by the Platosa Mine and equity and debt financings. The Company has in place a planning and budgeting process to help determine the funds required to support the Company's normal operating requirements on an ongoing basis, to support its exploration plans, and to ensure that it will have sufficient liquidity to meet its liabilities when due. To the extent the Company does not believe it has sufficient liquidity to meet these obligations, management will consider securing additional funds through equity or debt transactions.

Should financing be sought in the future, there can be no assurances that the Company will be able to obtain adequate funding or that the terms of such financing will be favourable. In the event that cash flow from operations is insufficient, failure to obtain additional financing could result in delay or indefinite postponement of further exploration and development of its projects and the possible loss of such properties. The Company has a limited history of earnings, has never paid a dividend, and does not anticipate paying dividends in the near future.

As at December 31, 2018, the Company had outstanding accounts payable excluding accrued liabilities, which are due within 90 days or less.

Credit Risk

Credit risk is the risk of unexpected loss if a customer or third party to a financial instrument fails to meet its contractual obligations. The Company's credit risk is primarily attributable to cash and cash equivalent. Management believes the credit risk on cash and cash equivalents is very low since the Company's cash and cash equivalents balance are held at large international financial institutions with strong credit ratings.

The Company is exposed to credit risk from its customers, which is a large multi-national corporation operating in the mining and oil & gas industries. Accounts receivable are subject to normal industry credit risks and are considered low.

Acquisition Strategy

As part of the Company's business strategy, it has sought and will continue to seek new exploration, development and mining opportunities in the resource industry. As a result, the Company may from time to time acquire additional mineral properties or securities of issuers which hold mineral properties. In pursuit of such opportunities, the Company may fail to select appropriate acquisition candidates or negotiate acceptable arrangements, including arrangements to finance acquisitions or integrate the acquired businesses and their personnel into the Company. The Company cannot assure that it can complete any acquisition or business arrangement that it pursues on favourable terms, or that any

acquisitions or business arrangements completed will ultimately benefit the Company.

Conflicts of Interest

Certain directors and officers are directors and/or officers of other mineral exploration companies and as such may, in certain circumstances, have a conflict of interest, if any, which arise will be subject to and governed by procedures prescribed by the Company's governing corporate law statute which requires a director of a corporation who is a party to, or is a director or an officer of, or has some material interest in any person who is a party to, a material contract or proposed material contract with the Company to disclose his or her interest and, in the case of directors, to refrain from voting on any matter in respect of such contract unless otherwise permitted under such legislation.

DIVIDENDS

The Company currently intends to retain future earnings, if any, to finance the growth and development of its business. During the last three fiscal years ended December 31, 2018, the Company did not pay any dividends. The Company does not currently have any intention to pay dividends.

DESCRIPTION OF CAPITAL STRUCTURE

Common Shares

The Company's authorized share capital consists of an unlimited number of Common Shares of which 99,205,034 Common Shares were issued and outstanding as at December 31, 2018. The holders of Common Shares are entitled to receive notice of and attend all meetings of shareholders with each Common Share entitling the holder to one vote on all matters voted on by shareholders, including the election of directors. Holders of Common Shares are entitled to receive dividends when, as and if declared by the Board. The *Business Corporations Act* (Ontario) provides that a corporation may not declare or pay a dividend if there are reasonable grounds for believing that the corporation is, or would after the payment of the dividend, be unable to pay its debts as they become due in the ordinary course of business. In the event of the dissolution, liquidation, or winding up of Excellon, holders of Common Shares are entitled to share rateably in any assets remaining after the satisfaction in full of the prior rights of creditors, including holders of Excellon's indebtedness.

MARKET FOR SECURITIES

The Company's Common Shares are listed and posted for trading on the TSX under the symbol "EXN". The table set out below presents the high and low sale prices for the Common Shares and trading volume, on a monthly basis on the TSX and alternate trading systems during the fiscal period ended December 31, 2018.

Month	High (\$)	Low (\$)	Volume
December	0.73	0.59	2,183,037
November	0.86	0.68	3,761,446
October	1.00	0.70	3,864,443
September	1.17	0.89	2,003,170
August	1.32	1.05	1,583,403
July	1.46	1.16	1,987,191

Month	High (\$)	Low (\$)	Volume
June	1.42	1.31	2,448,146
May	1.39	1.34	2,425,367
April	1.58	1.37	4,505,684
March	1.79	1.47	3,000,202
February	1.92	1.58	2,623,948
January	2.15	1.50	6,923,984

PRIOR SALES

The following table sets out warrants, stock options, DSUs and RSUs issued by the Company during the fiscal year ended December 31, 2018.

Date of Issuance	Number of Securities	Type of Security	Price per Security
January 1, 2018	13,587	RSUs	\$ 1.84
January 1, 2018	45,000	RSUs	\$ 1.84
March 26, 2018	265,000	Options	\$ 1.62
March 26, 2018	272,500	DSUs	\$ 1.62
March 26, 2018	661,500	RSUs	\$ 1.62
March 26, 2018	73,500	RSUs	\$ 1.62
April 2, 2018	41,385	DSUs	\$ 1.48
April 2, 2018	16,892	RSUs	\$ 1.48
April 2, 2018	10,000	RSUs	\$ 1.48
April 20, 2018	25,000	Options	\$ 1.50
April 20, 2018	42,500	RSUs	\$ 1.50
April 20, 2018	7,500	RSUs	\$ 1.50
August 1, 2018	39,844	DSUs	\$ 1.28
August 1, 2018	19,531	RSUs	\$ 1.28
October 1, 2018	27,605	DSUs	\$ 0.96
October 1, 2018	26,042	RSUs	\$ 0.96
December 31, 2018	25,000	Options	\$ 0.68
December 31, 2018	38,225	DSUs	\$ 0.69

DIRECTORS AND OFFICERS

The names, provinces and country of residence, period during which each has served as a director where applicable, positions held with the Company and principal occupation for the past five years of the directors and executive officers are as set out below. - (1) Member of the Audit Committee
- (2) Member of the Nominating and Corporate Governance Committee
- (3) Member of the Compensation Committee
- (4) Member of the Corporate Responsibility & Technical Committee
- (5) Special Opportunities Committee

Based on the disclosure available on the System for Electronic Disclosure by Insiders and confirmation by Management, as of March 29, 2019, the directors and executive officers of the Company, as a group, beneficially owned, directly or indirectly, or exercised control or direction over 1,269,435 Common Shares,

representing 1.3% of the issued and outstanding Common Shares.

Cease Trade Orders

To the best of the Company's knowledge, none of the directors or executive officers of the Company is, as at the date of this AIF, or has been within 10 years before the date hereof, a director, chief executive officer or chief financial officer of any company, including the Company, that: (i) was subject to a cease trade or similar order or an order that denied the relevant company access to any exemption under securities legislation, in any case that was in effect for more than 30 consecutive days that was issued while the director or executive officer was acting in the capacity as director, chief executive officer or chief financial officer; or (ii) was subject to an order that was issued after the director or executive officer ceased to be a director, chief executive officer or chief financial officer and which resulted from an event that occurred while that person was acting in the capacity as director, chief executive officer or chief financial officer.

Bankruptcies

To the best of the Company's knowledge, except as noted below, none of the directors or executive officers of the Company, or shareholders holding sufficient Common Shares to materially affect the control of the Company is, as at the date of this AIF, or has been within 10 years before the date hereof, a director, chief executive officer or chief financial officer of any company, including the Company, that, while that person was acting in that capacity, or within a year of that person ceasing to act in that capacity, became bankrupt, made a proposal under any legislation relating to bankruptcy or insolvency or was subject to or instituted any proceedings, arrangement or compromise with creditors or had a receiver, receiver manager or trustee appointed to hold its assets; or (ii) has become bankrupt, made a proposal under any legislation relating to bankruptcy or insolvency, or become subject to or instituted any proceedings, arrangement or compromise with creditors, or had a receiver, receiver manager or trustee appointed to hold the assets of the director, executive officer or shareholder.

Penalties and Sanctions

None of the directors or executive officers of the Company or, to the Company's best knowledge, shareholders holding sufficient Common Shares to materially affect the control of the Company is, as at the date of this AIF, or has been within 10 years before the date hereof, subject to:

- (i) any penalties or sanctions proposed by a court relating to securities legislation or by a securities regulatory authority or have entered into a settlement agreement with a securities regulatory authority, or
- (ii) any other penalties or sanctions imposed by a court or regulatory body that would likely be considered important to a reasonable investor in making an investment decision.

Conflicts of Interest

To the knowledge of the Company, no director or officer of the Company has an existing or potential conflict of interest with the Company or any of its subsidiaries except to the extent that certain officers and directors of the Company also act as officers and directors of other corporations active in mining and exploration, which may compete with the Company for business opportunities. Such directors are required by law, however, to act honestly and in good faith with a view to the best interests of the Company and its shareholders and to disclose any personal interest which they may have in any material

transaction which is proposed to be entered into with the Company and to abstain from voting as a director for the approval of any such transaction.

Audit Committee's Charter

The purpose of the Company's Audit Committee is to provide assistance to the Board in fulfilling its responsibilities with respect to matters involving the financial reporting process, the system of internal control and management of financial risks, the audit process, and the Company's process for monitoring compliance with laws and regulations and its own code of business conduct. A copy of the Company's Audit Committee Charter is attached as Schedule "A" and is available on the Company's website at www.excellonresources.com.

Composition of the Audit Committee

The members of the Audit Committee are Daniella Dimitrov (Chairperson), Alan R. McFarland and Andrew Farncomb. All current members of the Audit Committee meet the independence criteria set out in National Instrument 52-110 – Audit Committees ("NI 52-110").

Based on information provided by each director, the Board determined that all members of the Audit Committee are "financially literate" as that term is defined in NI 52-110.

Relevant Education and Experience

The education and experience of each member of the Audit Committee that is relevant to the performance of Audit Committee responsibilities is described below:

Daniella Dimitrov: Ms. Dimitrov is a Partner at Sprott Capital Partners LP (since October 2017) and a director (and member of the Audit Committee) of both Nexa Resources S.A. and International Petroleum Corp. Previously Chief Financial Officer and Chief Executive Officer of Orvana Minerals Corp. Ms. Dimitrov has held various roles in the mining industry since 2009, including as director and Executive Vice Chair of Baffinland Iron Mines and as a director and chair or a member of the Audit Committee of Aldridge Minerals Inc., Alloycorp Mining Inc., Orvana Minerals Corp. and Commonwealth Silver and Gold Inc. Ms. Dimitrov's former positions include Senior Vice President, Strategic Initiatives of Raymond James Ltd. and Chief Operating Officer of Dundee Securities. Ms. Dimitrov has a Bachelor of Laws from the University of Windsor and an Executive MBA from Kellogg School of Management and Schulich School of Business.

Alan R. McFarland: Mr. McFarland has over 45 years of experience in the field of investment banking. His work has covered a range of investment banking activities including general corporate advisory work on financial strategies, mergers, acquisitions and divestitures, public and private financings, venture capital, tax shelters, securities analysis, and corporate restructurings. He was a director and the Chair of the Audit Committee of Placer Dome, Inc. and a director of Masonite International Corporation. In the course of his work, he has gained extensive experience in evaluating financial statements, including those of companies in the mining industry, that present a breadth and level of complexity of accounting issues that are generally comparable to the breadth and complexity of issues likely to be raised by the Company's financial statements.

Andrew Farncomb: Mr. Farncomb is a founder of Cairn Merchant Partners LP, a merchant bank focused on advisory and principal investing. He has extensive experience advising public and private companies on mergers, acquisitions and financing transactions. He is a founder and director of Contact Gold Corp., an advanced stage Nevada gold exploration company, founder and director of Cairn Memory Care Fund GP, a residential dementia care business, a board member of several other TSX Venture Exchange listed companies and a board member and Chair of the Investment Committee at the Flavelle Family

Foundation. Mr. Farncomb was formerly a Partner and Investment Banking professional at Paradigm Capital Inc., a Canadian investment dealer, and graduated from Smith School of Business at Queen's University with a Bachelor of Commerce (Honours) degree.

Audit Committee Oversight

Since the commencement of the Company's most recently completed financial year, there has not been a recommendation of the Audit Committee to nominate or compensate an external auditor which was not adopted by the Company's Board of Directors.

Pre-Approval Policies and Procedures

The Audit Committee has a practice of pre-approving audit and non-audit services provided by the independent auditor. The Committee has delegated to its Chair, the authority, to be exercised between regularly scheduled meetings of the Audit Committee, to pre-approve audit and non-audit services provided by the independent auditor. All such pre-approvals shall be reported by the Chair at the meeting of the Audit Committee next following the pre-approval.

External Auditor Service Fees

The fees billed by the Company's auditor in each of the last two fiscal years are as follows (in USD dollars):

	Year ended December 31, 2018	Year ended December 31, 2017
Audit Fees ⁽¹⁾	\$199,000	\$229,000
Audit Related Fees ⁽²⁾	-	\$5,000
Tax Fees ⁽³⁾	\$93,000	\$71,000
All Other Fees	-	\$61,000
Total	\$292,000	\$366,000

(1) The aggregate audit fees billed in connection with statutory and regulatory filings, principally for the audit of the annual financial statements.

(2) The aggregate fees billed for assurance and related services that are reasonably related to the performance of the audits or reviewing the Company's financial statements and are not included under "Audit Fees".

(3) The aggregate fees billed for services related to tax compliance, tax advice and tax planning, including tax return preparation and other compliance matters.

LEGAL PROCEEDINGS AND REGULATORY ACTIONS

Other than as disclosed herein, management is not aware of any material litigation matters involving the Company outstanding as of the date hereof.

During the fiscal year ended December 31, 2018, the Company was not subject to:

- (a) any penalties or sanctions imposed by a court relating to securities legislation or by a securities regulatory authority;
- (b) any other penalties or sanctions imposed by a court or regulatory body that would likely be considered important to a reasonable investor in making an investment decision; or
- (c) any settlement agreements entered into with a court relating to securities legislation or with a securities regulatory authority.

INTEREST OF MANAGEMENT AND OTHERS IN MATERIAL TRANSACTIONS

No directors or executive officers of the Company and no person or company that is the direct or indirect beneficial owner of, or who exercises control or direction over, more than 10% of the Common Shares or any of their respective associates or affiliates, has or has had a material interest, direct or indirect, in any material transaction, whether proposed or concluded, which had, or may have, a material effect on the Company or its subsidiaries within the three most recently completed financial years or during the current financial year.

TRANSFER AGENTS AND REGISTRARS

The Company's transfer agent and registrar for its Common Shares in Canada is TSX Trust Company, 100 Adelaide Street West, Suite 301, Toronto, Ontario, M5H 4H1.

MATERIAL CONTRACTS

The Company is not currently party to any material agreements.

INTERESTS OF EXPERTS

Michael Selby, P.Eng., Sebastien Bernier, P.Geo., Mark Liskowich, P.Geo., and Blair Hrabı, P.Geo., of SRK Consulting (Canada) Inc., Chantal Jollette, P.Geo., of Analytical Solutions Ltd. and Ben Pullinger, P.Geo. and Denis Flood, P.Eng, officers of the Company, prepared the Technical Report. To the Company's knowledge as at March 29, 2019, the persons or companies referred to above beneficially owned, directly or indirectly, less than 1% of the outstanding securities of the Company.

PricewaterhouseCoopers LLP, Chartered Professional Accountants, Licensed Public Accountants, is the auditor of the Company and has advised the Company that they are independent in accordance with the Rules of Professional Conduct of the Chartered Professional Accountants of Ontario.

ADDITIONAL INFORMATION

Additional information relating to the Company may be found under the Company's profile on SEDAR at www.sedar.com.

Additional information, including directors' and officers' remuneration and indebtedness, principal holders of the Company's Common Shares and the Common Shares authorized for issuance under the Company's stock option plan, is contained in the Company's management information circular filed on SEDAR for the upcoming annual meeting of shareholders to be held on May 9, 2019.

Additional financial information is provided in the Company's consolidated Financial Statements and Management's Discussion and Analysis for its financial year ended December 31, 2018.

SCHEDULE "A"

EXCELLON RESOURCES INC.

Audit Committee Charter

OVERALL PURPOSE AND OBJECTIVES

1. The Audit Committee ("Committee") is established by and among the Board of Directors (the "**Board**") of Excellon Resources Inc. (the "**Company**") for the primary purpose of assisting the Board in fulfilling its oversight responsibility to shareholders, potential shareholders, the investment community and others relating to:
 - The integrity of the Company's financial statements, management's discussion and analysis ("MD&A"), and financial press releases before publicly disclosed.
 - The Company's compliance with legal and regulatory requirements.
 - The Company's public accounting firm's (independent auditor's) qualifications and independence.
 - The performance of the Company's independent auditor which include preparation of the audit committee reports as required by applicable regulators.
 - The Company's systems of disclosure controls and procedures, internal controls over financial reporting, and compliance with ethical standards adopted by the Company.
2. In performing its duties, the Committee will maintain effective working relationships with the Board, management, and the independent auditors and monitor the independence of those auditors. To perform his or her role effectively, each Committee member will obtain an understanding of the responsibilities of Committee membership as well as the Company's business, operations and risks.
3. Consistent with this function, the Committee should encourage continuous improvement of, and should foster adherence to, the Company's policies, procedures, and practices at all levels. The Committee should also provide for open communication among the independent auditor, financial and senior management, the internal audit function, if any, and the Board.

AUTHORITY

4. The Board authorizes the Committee, within the scope of its responsibilities, to seek any information it requires from any employee and from external parties, to obtain outside legal or other professional advice and to ensure the attendance of Company officers at meetings as appropriate.
5. The Committee has the authority to conduct investigations into any matters within its scope of responsibility and obtain advice and assistance from outside legal, accounting, or other advisers, as necessary, to perform its duties and responsibilities.
6. In carrying out its duties and responsibilities, the Committee shall also have the authority to meet with and seek any information it requires from employees, officers, directors, or external parties.

7. The Committee will primarily fulfill its responsibilities by carrying out the activities enumerated in Section III of this charter.

COMPOSITION AND MEETINGS

8. The Committee will comprise three or more directors as determined by the Board.
9. Each Committee member will meet the applicable standards of independence within the meaning of applicable securities laws, rules, policies, regulations, guidelines and instruments, including National Instrument 52-110 – *Audit Committees* (“NI 52-110”) and by any stock exchanges on which the Company’s securities are listed.
10. Each member of the Committee shall be financially literate. Financial literacy is defined in NI 52-110 as the ability to read and understand a set of financial statements that present a breadth and level of complexity of accounting issues that are generally comparable to the breadth and complexity of the issues that can reasonably be expected to be raised by the Company’s financial statements.
11. To help meet these requirements, the Committee will provide its members with access to annual continuing education opportunities in financial reporting and other areas relevant to the Committee.
12. Committee members will be appointed by the Board at the annual organizational meeting of the Board to serve until their successors are elected. Unless a Chairperson is elected by the full Board, the members of the Committee may designate a Chairperson by majority vote.
13. The Committee will meet at least quarterly, or more frequently as circumstances dictate. The internal auditors may request a meeting, if they consider one is necessary, as may any Committee member. Notice of each meeting confirming the venue, time and date, together with an agenda of items to be discussed, shall be forwarded to each member of the committee, and any other person required to attend, no later than 48 hours prior to the meeting.
14. The Committee Chairperson will approve the agenda for the Committee’s meetings and any member may suggest items for consideration. Briefing materials will be provided to the Committee as far in advance of meetings as practicable.
15. Members may attend meetings either in person, by telephone or through other electronic means of communication. At any meeting of the Committee, a quorum shall be a majority of the members.
16. The secretary of the Committee will keep regular minutes of Committee proceedings, and will circulate them to all Committee members, the Chair of the Board, and to any other director on a timely basis, when requested. Decisions and recommendations of the Committee shall be made by a majority of the members present at the meeting.
17. At the end of the meeting, the Committee shall hold an in camera session with the independent auditors and without any senior officers present at each meeting of the Committee, unless such a session is not considered necessary by the members present.
18. As part of its responsibility to foster open communication, the Committee will meet periodically

with management and the independent auditor in separate executive sessions. In addition, the Committee will meet with the management and the independent auditor to discuss the annual audited financial statements and quarterly financial statements, including the disclosures in the accompanying MD&As.

ROLES, RESPONSIBILITIES AND DUTIES

19. To fulfill its responsibilities and duties, the Committee will:

Documents / reports / accounting information review

20. Review this charter at least annually and recommend to the board of directors any necessary amendments.

21. Meet with management and the independent auditor to:

- a. review and discuss the Company's annual financial statements and quarterly financial statements (prior to the Company's regulatory filings or release of earnings), as well as all internal control reports (or summaries thereof)
- b. review other relevant reports or financial information submitted by the Company to any governmental body or the public, including MD&As, press releases containing financial information, management certifications and relevant reports rendered by the independent auditor (or summaries thereof).

22. Discuss earnings press releases, including the type and presentation of information, paying attention to any pro forma or adjusted information.

23. Discuss financial information and guidance provided to the public, analysts and ratings agencies, as applicable.

24. Review the regular internal reports to management (or summaries thereof) prepared by the internal audit function, if any, as well as management's response.

Independent Auditor

25. Appoint, compensate, retain, and oversee the work performed by the independent auditor retained to prepare or issue an audit or review report or related work. Review the performance and independence of the independent auditor and remove the independent auditor if circumstances warrant. The independent auditor will report directly to the Committee and the Committee will oversee the resolution of disagreements between management and the independent auditor if any arise.

26. Actively engage in dialogue with the independent auditor with respect to any disclosed relationships or services that may affect the independence and objectivity of the auditor and take appropriate actions to oversee the independence of the independent auditor.

27. Review the independent auditors' proposed audit scope and approach and ensure no unjustifiable restriction or limitations have been placed on the scope.
28. Review and preapprove both audit and non-audit services to be provided by the independent auditor. The authority to grant preapprovals may be delegated to one or more designated members of the Committee, whose decisions will be presented to the full Committee at its next regularly scheduled meeting.
29. Consider whether the auditor's provision of permissible non-audit services is compatible with the auditor's independence.
30. Review with the independent auditor any problems, difficulties or disagreements with management regarding the preparation of the financial statements and review management's response.
31. Hold timely discussions with the independent auditor regarding the following:
 - a. All critical accounting policies and practices.
 - b. All alternative treatments of financial information within generally accepted accounting principles related to material items that have been discussed with management, ramifications of the use of such alternative disclosures and treatments, and the treatment preferred by the independent auditor.
 - c. Other material written communications between the independent auditor and management, including, but not limited to, the management letter and schedule of unadjusted differences.
32. At least annually, obtain and review a report by the independent auditor describing:
 - a. The independent auditor's internal quality-control procedures.
 - b. Any material issues raised by the most recent internal quality-control review or peer review, or by any inquiry or investigation by governmental or professional authorities within the preceding five years with respect to independent audits carried out by the independent auditor, and any steps taken to deal with such issues.

This report should be used to evaluate the independent auditor's qualifications, performance, and independence. Further, the Committee will review the experience and qualifications of the lead partner each year and determine that all partner rotation requirements, as promulgated by applicable rules and regulations, are executed. The Committee will also consider whether there should be rotation of the independent auditor itself. The Committee should present its conclusions to the full board.

33. Review and approve the Company's hiring policies, as applicable, regarding partners, employees and former partners and employees of the present and former independent auditors of the Company.

Financial Reporting Process / Accounting Policies / Internal Control Procedures

34. Gain an understanding of the current areas of greatest financial risk and whether management is managing these effectively.
35. Evaluate the fairness of annual and interim financial statements and related disclosures including the associated Management's Discussion and Analysis, and obtain explanations from management on whether:
 - a. actual financial results for the interim period varied significantly from budgeted or projected results;
 - b. generally accepted accounting principles have been consistently applied;
 - c. there are any actual or proposed changes in accounting or financial reporting practices; or
 - d. there are any significant or unusual events or transactions which require disclosure and, if so, consider the adequacy of that disclosure.
36. Review significant accounting and reporting issues, including recent professional and regulatory pronouncements, and understand their impact on the financial statements.
37. In consultation with the independent auditor and the internal audit function, review the integrity of the Company's financial reporting processes (both internal and external).
38. Periodically review the adequacy and effectiveness of the Company's disclosure controls and procedures and the Company's internal control over financial reporting, including any significant deficiencies and significant changes in internal controls. As part of the review, the Committee should gain an understanding of whether internal control recommendations made by the independent auditors have been implemented by management.
39. Understand the scope of the internal and independent auditors' review of internal control over financial reporting and obtain reports on significant findings and recommendations, together with management responses.
40. Receive and review any disclosure from the Company's CEO and CFO made in connection with the certification of the Company's quarterly and annual reports of: a) significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the Company's ability to record, process, summarize, and report financial data; and b) any fraud, whether or not material, that involves management or other employees who have a significant role in the Company's internal controls.
41. Review major issues regarding accounting principles and financial statement presentations, including any significant changes in the Company's selection or application of accounting principles; major issues as to the adequacy of the Company's internal controls; and any special audit steps adopted in light of material control deficiencies.
42. Review analyses prepared by management and the independent auditor setting forth significant financial reporting issues and judgments made during the preparation of the financial statements, including analyses of the effects of alternative IFRS methods on the financial statements.

43. Review the effect of regulatory and accounting initiatives, as well as off-balance-sheet structures, on the financial statements of the Company.
44. Review related party transactions to ensure that they reflect market practice and are in the best interests of the Company.
45. Oversee confidential investigation of anonymous submissions by Company employees regarding questionable accounting, auditing, or internal control matters in accordance with the Company's Whistleblower Policy. In accordance with the Whistleblower Policy, establish procedures for the receipt, retention, and treatment of complaints regarding accounting, internal accounting controls, or auditing matters.
46. Receive reports from the Company's Chief Financial Officer on the scope and material results of the Company's internal control activities.

Internal Audit

47. Review and advise on the selection, reassignment or and dismissal of the internal audit officer (if applicable).
48. Review the activities and organizational structure of the internal audit function, as well as the qualifications of its personnel.
49. Annually, review and recommend changes (if any) to the internal audit charter.
50. Periodically review with the internal audit officer (if any), any significant difficulties, disagreements with management, or scope restrictions encountered while performing the function's work including the resolution of disagreements between management and the internal auditors regarding internal controls.
51. Periodically review, with the independent auditor, the internal audit function's responsibility, budget, and staffing.

Ethical Compliance/Legal Compliance/Risk Management

52. Oversee, review, and periodically update the Company's code of business conduct and ethics and the Company's system to monitor compliance with and enforce this code.
53. Review, with the Company's counsel, legal compliance and legal matters that could have a significant impact on the Company's financial statements reporting.
54. Discuss policies with respect to risk assessment and risk management, including appropriate guidelines and policies to govern the process, as well as the Company's major financial risk exposures and the steps management has undertaken to identify, manage, and mitigate them.

55. Consider the risk of management's ability to override the Company's internal controls.
